# Fertility and COVID-19 Vaccine

## Get the facts you need to decide.

Scan me for more info!

## Is it safe for me to get the vaccine if I would like to have a baby one day?

**Yes!** No vaccine in the history of vaccines has ever been linked to fertility issues -- for men or for women.

There is no evidence that COVID-19 vaccination causes any problems with fertility or pregnancy.

## Is it safe for me to get a COVID-19 vaccine if I'm pregnant?

**Yes!** Data from over 35,000 pregnant COVID-19 vaccine recipients indicates that vaccines are safe and effective for pregnant people. People who are pregnant are at increased risk for severe illness from COVID-19, so talk to your health care provider to make the best decision for you.

## Can I get a COVID-19 vaccine if I'm currently breastfeeding?

**Yes!** There is no evidence to suggest that COVID-19 vaccines pose a risk to lactating people or their breastfeeding babies.

Recent reports have shown that breastfeeding people who have received COVID-19 mRNA vaccines have antibodies in their breastmilk, which could help protect their babies.
