

Clinical Advisory Subcommittee of the Emergency Medical Care Committee

Meeting Agenda

10:15 A.M. Thursday, June 21st, 2023

Location: SLOEMSA Conference Room

2995 McMillan Ave, Ste 178

San Luis Obispo, CA 93401

Members

CHAIR: Dr. Stefan Teitge, *County Medical Society*
 Dr. Heidi Hutchinson, *ED Physician Adventist*
 Dr. Kyle Kelson, *ED Physician Adventist*
 Dr. Lucas Karaelias, *ED Physician Dignity*
 Diane Burkey, *MICNs*
 Rob Jenkins, *Fire Service Paramedics*
 Nate Otter, *Ambulance Paramedics*
 Paul Quinlan, *Fire Service EMTs*
 Lisa Epps, *Air Ambulance*
 Jeffrey Hagins, *Air Ambulance*
 Arneil Rodriguez, *Ambulance EMTs*
 Casey Hidle, *Lead Field Training Officer*
 VACANT, *Medical Director Appointee*

Staff

STAFF LIAISON: Ryan Rosander, *EMS Coordinator*
 VACANT, *EMS Division Director*
 Dr. William Mulkerin, *Medical Director*
 Rachel Oakley, *EMS Coordinator*
 VACANT, *EMS Coordinator*
 Alyssa Vardas, *EMS Admin Assistant III*

AGENDA	ITEM	LEAD
Call to Order 1020	Introductions	Dr. Teitge
	Public Comment	
Summary Notes	No additions – R. Jenkins motions, N. Otter 2nds, Approved	
Discussion	<p>Revised Protocols #602, 641, 661, Revised Procedures #717, 718:</p> <ul style="list-style-type: none"> - Added provider discretion for which ALS airway to use, ETI or SGA. - Removed all language about first visualizing a patient's airway/vocal cords before SGA utilization. - Added PCR documentation component if ALS airway cannot be established. - Added after the second ETI attempt, the provider shall proceed to SGA. <p>Discussion:</p> <ul style="list-style-type: none"> - C. Hidle likes how it has been simplified. - R. Jenkins mentions how there was a big misconception in the field that you could not do an SGA. - D. Burkey asks if this will be part of the update. - N. Otter asks if we pull an SGA to put in an ETI. 	Ryan

	<ul style="list-style-type: none"> - R. Jenkins says it might be worth saying that these methods are equivalent. - N. Otter asks if we can explain it in the EMS Update Class. <p>Note that this was supported by members present:</p>	
Adjourn - 1123	<p>Future Agenda Items:</p> <ul style="list-style-type: none"> - Airway Management, Needle Thoracostomy, Use of Restraints, Scene Management and Physician on Scene 	Dr. Teitge
	<p>Next meeting date – Friday, June 21st, 2024</p> <p>1015 hrs – EMSA Conference Room 2995 McMillan Ave. Suite 178 San Luis Obispo, CA 93401</p>	

DRAFT

COUNTY OF SAN LUIS OBISPO HEALTH AGENCY

PUBLIC HEALTH DEPARTMENT

Penny Borenstein, MD, MPH Health Officer/Public Health Director

MEETING DATE	June 21 st , 2024
STAFF CONTACT	Ryan Rosander, EMS Coordinator 805.788.2513 rrosander@co.slo.ca.us
SUBJECT	Traumatic cardiac arrest, needle thoracostomy, IO, restraints, scene management, and physician on scene.
SUMMARY	<p>SLOEMSA and the trauma team at Sierra Vista have been working hand in hand to enhance trauma care within the county. As part of this joint effort, SLOEMSA is taking the traumatic cardiac arrest and needle thoracostomy protocol/procedure through the committee process for a recommendation for adoption. The proposed changes are designed to benefit a workable patient in cardiac arrest due to a traumatic event, where bilateral needle thoracostomy would be performed. Additionally, SLOEMSA is exploring the possibility of placing the midaxillary 4th intercostal space decompression site as a standing order.</p> <p>SLOEMSA is committed to empowering our paramedics working within the county with more options and discretion for patient care. In line with this, SLOEMSA proposes adding the humeral head and medial malleolus IO sites as standing orders, giving our paramedics the flexibility they need to provide the best possible care.</p> <p>Several stakeholders within the county have discussed handcuffs or restraints placed behind the patient’s back during the last couple of months. For safety reasons, SLOEMSA wishes to add no handcuffs or restraints behind a patient’s back to the restraint policy.</p> <p>Over the past year, several stakeholders have approached SLOEMSA with suggestions for reworking the scene management policy, particularly emphasizing the need to incorporate a communications piece. This crucial aspect of scene management would ensure all units on scene are on the same frequency, thereby enhancing the safety of all EMS crews involved. Having all crews on the same frequency will significantly improve coordination, especially in more complex and demanding scenes.</p> <p>SLOEMSA is also adding a separate physician-on-scene policy. This will further lay out the three options given to physicians and paramedics by California EMSA and California CMA.</p> <p>Following approval, revisions to protocols #602 Airway Management, #661 Traumatic Cardiac Arrest, procedures #705 Needle Thoracostomy, #710 Vascular Access and Monitoring, #711 Use of Restraints, and Policy #200 Scene Management, #217 Physician on Scene would be</p>

Emergency Medical Services

2995 McMillan Way Suite 178 | San Luis Obispo, CA 93401 | (P) 805-781-2519

www.slocounty.ca.gov/ems

	sent to the EMCC for approval. The potential implementation date would be after training occurs during the 2024 SLOEMSA Update Class.
REVIEWED BY	Dr. William Mulkerin, SLOEMSA Staff, Operations Subcommittee
RECOMMENDED ACTION(S)	Recommended revisions to protocols #602, #661, procedures #705, #710, #711, and policies #200 Scene Management, #217 Physician on Scene for adoption by Operations and move to EMCC Agenda.
ATTACHMENT(S)	Protocols: #602, #661 Procedures: #705, #710, #711 Policies: #200, #217, #217 Attachment A

AIRWAY MANAGEMENT	
ADULT	PEDIATRIC (≤34 kg)
BLS	
<ul style="list-style-type: none"> • Universal Protocol #601 • Administer O₂ as clinical symptoms indicate (see notes below) • Pulse oximetry • Patients with O₂ Sat ≥ 94% without signs or symptoms of hypoxia or respiratory compromise should not receive O₂ • When applying O₂ use the simplest method to maintain O₂ Sat ≥ 94% • Do not withhold O₂ if patient is in respiratory distress • Foreign Body/Airway Obstruction <ul style="list-style-type: none"> ○ Use current BLS choking procedures ○ Basic airway adjuncts and suctioning as indicated and tolerated 	<p style="text-align: center;">Same as Adult (except for newborns)</p> <ul style="list-style-type: none"> • Newborn (< 1 day) follow AHA guidelines – Newborn Protocol #651
BLS Elective Skills	
<ul style="list-style-type: none"> • Moderate to Severe Respiratory Distress <ul style="list-style-type: none"> ○ CPAP as needed – CPAP procedure #703 	<p style="text-align: center;">CPAP not used for patients ≤34 kg</p>
ALS Standing Orders	
<ul style="list-style-type: none"> • Foreign Body/Airway Obstruction If obstruction not relieved with BLS maneuvers <ul style="list-style-type: none"> ○ Visualize and remove obstruction with Magill forceps ○ If obstruction persists, consider – Needle Cricothyrotomy Procedure #704 ○ Upon securing airway monitor O₂ Sat and ETCO₂ – Capnography Procedure #701 • Endotracheal intubation – as indicated to control airway – Procedure #717 • Supraglottic Airway – as indicated to control airway – Procedure #718 • Needle thoracostomy with symptoms of tension pneumothorax or traumatic arrest with the possibility of chest trauma – Needle Thoracostomy Procedure #705 & Traumatic Cardiac Arrest Protocol #661 	<ul style="list-style-type: none"> • Foreign Body/Airway Obstruction If obstruction not relieved with BLS maneuvers <ul style="list-style-type: none"> ○ Visualize and remove obstruction with Magill forceps ○ If obstruction persists, consider – Needle Cricothyrotomy Procedure #704 ○ Upon securing airway monitor O₂ Sat and ETCO₂ – Capnography Procedure #701 • Needle thoracostomy with symptoms of tension pneumothorax – Needle Thoracostomy Procedure #705
Base Hospital Orders Only	
<ul style="list-style-type: none"> • Symptomatic Esophageal Obstruction 	<ul style="list-style-type: none"> • Symptomatic Esophageal Obstruction <ul style="list-style-type: none"> ○ Glucagon 0.1mg/kg IV not to exceed 1mg followed by rapid flush. Give oral

<ul style="list-style-type: none"> ○ Glucagon 1mg IV followed by rapid flush. Give oral <u>fluid</u> challenge 60 sec after admin - check a blood sugar prior ● As needed 	<p style="text-align: center;"><u>fluid</u> challenge 60 sec after admin - check a blood sugar prior</p> <ul style="list-style-type: none"> ● As needed
Notes	
<ul style="list-style-type: none"> ● Oxygen Delivery <ul style="list-style-type: none"> ○ Mild distress – 0.5-6 L/min nasal cannula ○ Severe respiratory distress – 15 L/min via non-rebreather mask ○ Moderate to severe distress – CPAP 3-15 cm H2O ○ Assisted respirations with BVM – 15 L/min ● Pediatric intubation is no longer an approved ALS skill – maintain with BLS options. ● Patients requiring an advanced airway, providers shall decide which ALS airway to utilize based on discretion. ● After placement of any advanced airway, providers shall verify placement of the advanced airway by waveform capnography and a minimum of one additional method. This additional method can be any of the following: <ul style="list-style-type: none"> ○ Auscultation of lung and stomach sounds. ○ Colorimetric CO2 Detector Device. ○ Esophageal Bulb Detection Device. 	

DRAFT

TRAUMATIC CARDIAC ARREST	
ADULT	PEDIATRIC (≤34KG)
BLS	
<ul style="list-style-type: none"> • Universal Protocol #601 • Obvious Death – see Prehospital Determination of Death Policy #125 • Follow HPCPR guidelines for CPR (10:1) and minimize interruptions (< 5 seconds) 	Same as Adult
BLS Optional	
Pulse Oximetry – O ₂ administration per Airway Management Protocol #602	
ALS Standing Orders	
<p>Traumatic arrest <u>with</u> signs of life on EMS arrival and < 20 min from trauma center or hospital</p> <ul style="list-style-type: none"> • Do not delay transport • Perform ALS treatments en route • Normal Saline up to 500 mL – repeat x1 if no ROSC or SBP of < 90 mmHg • Do not use Epinephrine or Lidocaine unless the arrest is suspected to be of medical origin • Resuscitate and treat for reversible causes, i.e. hypoxia, hypovolemia, tension pneumothorax • For suspected tension pneumothorax see Needle Thoracostomy Procedure #705 • Traumatic arrest with the possibility of chest trauma, bilateral needle thoracostomy shall be performed. See Needle Thoracostomy Procedure #705. <p style="text-align: center;">Traumatic arrest <u>with absent</u> signs of life on EMS arrival</p> <ul style="list-style-type: none"> • With absent signs of life consider non-initiation – Prehospital Determination of Death Policy #125 	<p style="text-align: center;">Same as Adult (except as noted below)</p> <ul style="list-style-type: none"> • Normal Saline 20 mL/kg IV/IO – reassess and repeat
Base Hospital Orders Only	
<ul style="list-style-type: none"> • Traumatic arrest <u>with</u> signs of life on EMS arrival and > 20 min from trauma center or hospital <ul style="list-style-type: none"> ○ Contact SLO Trauma Center for treatment and/or destination • Termination of resuscitation • As needed 	Same as Adult

Notes

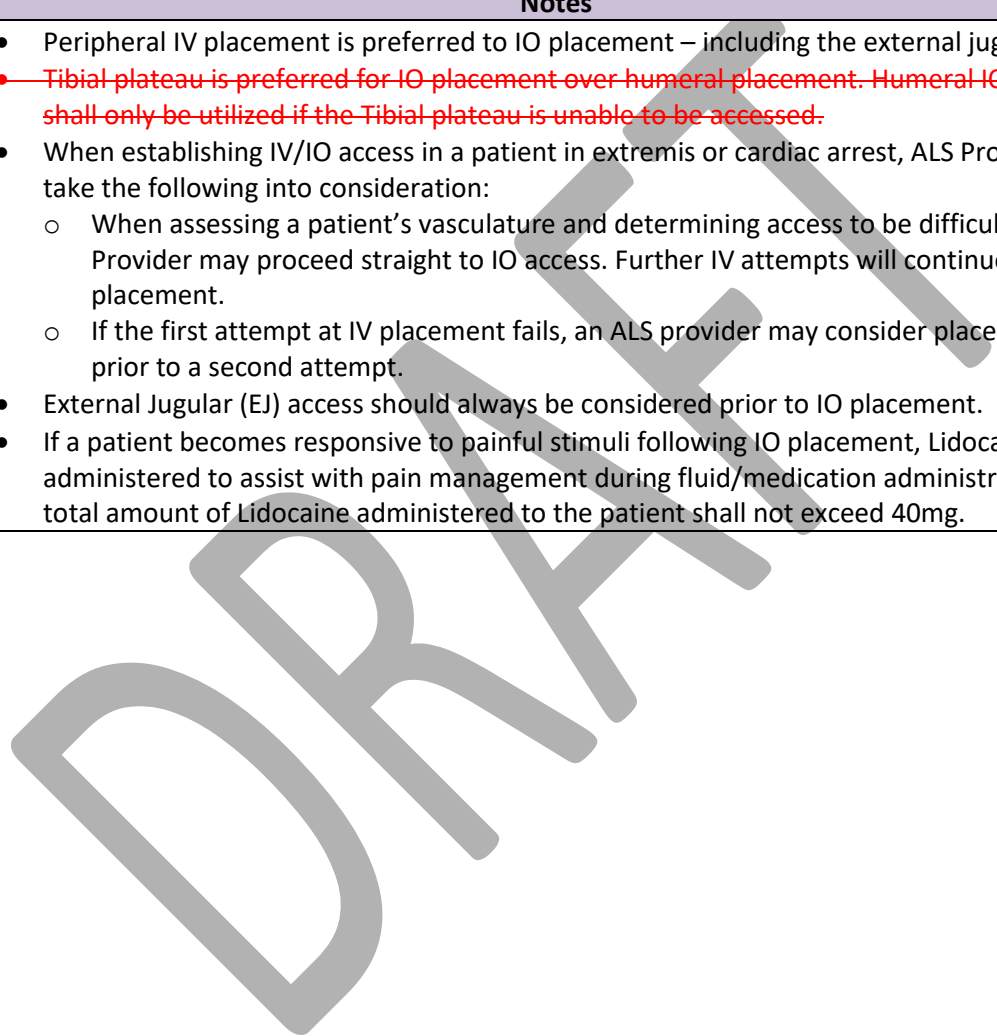

- Absent signs of life assessment include: pulseless, apneic, lack of heart and lung sounds, fixed and dilated pupils.
- Trauma Center is the preferred destination if equal or near equal distance.
- Do not delay transport for advanced airway or other treatment modalities.
- Consider medical origin in older patients with low probable mechanism of injury.
- Unsafe scene or other circumstances may warrant transport despite low potential for survival.
- Minimize disturbance of potential crime scene.
- Consider Oral Intubation or Supraglottic Airways (Adults), provider discretion.
- If the provider cannot accomplish an ALS airway, they should document in the PCR why an ALS airway wasn't accomplished.

DRAFT

NEEDLE THORACOSTOMY	
ADULT	PEDIATRIC (≤34KG)
BLS	
Universal Protocol #601	
BLS Optional	
Pulse Oximetry – O ₂ administration per Airway Management Protocol #602	
ALS Standing Orders	
<ul style="list-style-type: none"> • Locate mid-clavicular 2nd intercostal space or mid-axillary 4th intercostal space on affected side • Prep site with povidone-iodine and alcohol • With syringe attached, insert large bore IV catheter (maximum 10 Ga.) at a 90° angle slightly superior to the rib • Once in the pleural space diminished resistance should be noted with air and/or blood return • Holding the needle, advance the catheter and remove the needle allowing pressure to be relieved • Secure the catheter and provide for a one-way valve • Assess and reassess lung sounds 	
Base Hospital Orders Only	
<ul style="list-style-type: none"> • For decompression location at the mid-axillary 4th intercostal space • As needed 	
Notes	
<p>Indication: Tension pneumothorax with significant respiratory compromise</p> <ul style="list-style-type: none"> • Signs and symptoms may include: <ul style="list-style-type: none"> ○ Deteriorating respiratory status ○ Decreased SBP, increased pulse ○ Diminished lung sounds on affected side ○ Jugular vein distension ○ Hyper-resonance to percussion on affected side ○ Tracheal shift away from affected side (difficult to assess) ○ Increased resistance with ventilation (BVM, ET) • Equipment <ul style="list-style-type: none"> ○ Large IV catheter (10-12 Ga.) with a syringe ○ One-way valve i.e. Asherman Seal ○ Antiseptic products, povidone-iodine/alcohol swabs <p>Indication: Traumatic arrest with signs of life on EMS arrival and < 20 min from trauma center or hospital, with the possibility of chest trauma, bilateral needle thoracostomy shall be performed.</p>	

VASCULAR ACCESS AND MONITORING	
ADULT	PEDIATRIC (≤34KG)
BLS	
<ul style="list-style-type: none"> • Universal Protocol #601 • In stable patients, providers may monitor and turn off IV lines of isotonic balanced salt solutions without medication or electrolyte additives and flowing at a maintenance rate 	
BLS Optional	
Pulse Oximetry – O ₂ administration per Airway Management Protocol #602	
ALS Standing Orders	
<ul style="list-style-type: none"> • Establish IV with drip set or saline lock as appropriate. • Tibial plateau, humeral head, or medial malleolus Intraosseous (IO) placement may be utilized for: <ul style="list-style-type: none"> ○ Patients in extremis or cardiac arrest with hemodynamic instability/respiratory distress/cardiac arrest. AND ○ Unable to establish following attempt(s) or general suspicion of the inability to establish vascular access. • Attempts to establish vascular access shall be continued even if IO is successful. • If patient becomes responsive to painful stimuli following IO administration: <ul style="list-style-type: none"> ○ Lidocaine 0.5mg/kg (Total max dose of 40mg) slow IO push over 60 seconds. • ALS providers can monitor and administer medications through a Pre-existing Vascular Access Device (PVAD). These pre-existing catheters are: <ul style="list-style-type: none"> ○ Peripheral Inserted Central Catheter (PICC Line) ○ Midline IV Catheters • PVAD access procedure: <ul style="list-style-type: none"> ○ Wipe the access port with an alcohol pad to ensure aseptic technique. ○ Ensure that if your line is a dual lumen line that it is the line designated for medication administration (do not use the line utilized for blood, this can be identified by a red colored catheter or stated on the catheter). ○ Attach a 10ml syringe and draw up 5-10ml of fluid out of the line until blood is noted in the syringe. This is to ensure the line is not pre-loaded with heparin. ○ Discard the filled syringe and flush the line with an entire 10cc saline flush. This is to ensure that the line is clean and ready for medication administration. ○ Connect the syringe with the desired medication and administer according to the appropriate formulary. Follow the medication administration with an entire 10cc saline flush. ○ If any sort of cap was used to cover the port, ensure the cap is wiped down and placed back on the port following use. ○ If the patient is needing an infusion from a saline bag, ALS Providers may connect the IV line to the PVAD after the line has been aspirated per instructions listed above. After the infusion is finished, ensure the line is flushed with a 10cc saline flush, and wipe the port with an alcohol pad. If any sort of cap was used to cover the port, ensure the cap is wiped down and placed back on the port following use. 	

Base Hospital Orders Only
<ul style="list-style-type: none">• Pain management if patient becomes conscious after establishing IO access• Humeral IO Placement• Access to tunneled/non-tunneled Central Lines for patients in extremis or cardiac arrest. Access of these central lines shall follow the PVAD access procedure listed above.• As needed
Notes
<ul style="list-style-type: none">• Peripheral IV placement is preferred to IO placement – including the external jugular.• Tibial plateau is preferred for IO placement over humeral placement. Humeral IO placement shall only be utilized if the Tibial plateau is unable to be accessed.• When establishing IV/IO access in a patient in extremis or cardiac arrest, ALS Providers will take the following into consideration:<ul style="list-style-type: none">○ When assessing a patient’s vasculature and determining access to be difficult, an ALS Provider may proceed straight to IO access. Further IV attempts will continue following IO placement.○ If the first attempt at IV placement fails, an ALS provider may consider placement of an IO prior to a second attempt.• External Jugular (EJ) access should always be considered prior to IO placement.• If a patient becomes responsive to painful stimuli following IO placement, Lidocaine may be administered to assist with pain management during fluid/medication administration. The total amount of Lidocaine administered to the patient shall not exceed 40mg.

USE OF RESTRAINTS	
ADULT	PEDIATRIC (≤34KG)
BLS	
<ul style="list-style-type: none"> • Universal Protocol #601 • Pulse Oximetry – O₂ administration per Airway Management Protocol #602 • Application of restraints – see Notes • Evaluate restrained extremities for pulse quality, capillary refill, color, nerve and motor function every 15 minutes 	
ALS Standing Orders	
Severely agitated or aggressive patients that interfere with patient care, or patient/crew safety refer to Behavioral Protocol #613	
Base Hospital Orders Only	
As needed	
Notes	
<ul style="list-style-type: none"> • Restraints for prehospital use must be either padded leather or a soft material and allow for quick release <ul style="list-style-type: none"> ○ No hard plastic ties ○ No “sandwiching” the patient between backboards or like devices ○ No restraining hands and feet behind the patient (“hog-tying”) ○ No methods or material applied in a manner that cause respiratory, vascular or neurological compromise ○ Patient may not be transported in the prone position <li style="background-color: #ffff00;">○ No handcuffs or restraints of any kind behind patient’s back. • Indications <ul style="list-style-type: none"> ○ For patients who are violent, or may harm themselves or others during field treatment or transport • Documentation shall include: <ul style="list-style-type: none"> ○ Reasons and time restraints were applied ○ Which agency/personnel applied the restraint ○ Evaluation of restrained extremities for pulse quality, capillary refill, color, nerve and motor function every 15 minutes ○ Evaluation of respiratory status • Method of application shall allow for monitoring of vital signs and shall not restrict the ability to protect the patient’s airway, or compromise neurological or vascular status • Restraints applied by law enforcement and not approved for use by EMS personnel: <ul style="list-style-type: none"> ○ Require the officer to remain available at the scene or during transport to remove or adjust restraints for patient safety ○ Must allow for straightening of the abdomen and chest to allow for full tidal volume respirations • Aggressive or violent behavior may be a symptom of medical conditions such as head trauma, alcohol, drug related problems, metabolic disorders, stress or psychiatric disorders. 	

POLICY #200: SCENE MANAGEMENT

I. PURPOSE

- A. To clarify the local application of Section 1798 of the Health and Safety Code as it relates to scene management and the related responsibilities of emergency medical service (EMS) first response agencies, transport services, and base hospitals in the County of San Luis Obispo.

II. POLICY

A. AUTHORITY FOR SCENE MANAGEMENT

1. Authority for the management of the scene of an emergency is vested in the appropriate public safety agency having primary investigative authority, law enforcement or fire suppression. Scene management at this highest level includes not only the safety of the EMS team and its patient(s) but other persons who may be exposed to the risks and the public. While public safety officials shall consult emergency medical services personnel in the determination of relevant risks, they retain the authority for scene management and incident command.
2. Responsibility to mitigate criminal activities and environmental hazards lies with the appropriately trained and equipped public safety agency. EMS providers without these responsibilities will not knowingly enter a crime scene or a hazardous scene until the appropriate public safety agency has arrived, secured the scene, and deemed it reasonably 'safe to enter'.
3. The appropriate public safety agency is responsible for the non-medical aspects of scene management. When EMS transport personnel have arrived first, there is no apparent hazard, and transport personnel are managing the non-medical aspects of the scene; the responsibility for scene management will pass to public safety personnel upon their arrival and with appropriate information exchange.
4. The Incident Commander shall make all resource ordering and canceling decisions.

B. AUTHORITY FOR PATIENT HEALTH CARE MANAGEMENT

1. Authority for patient health care management in an emergency is vested in any paramedic or other prehospital emergency personnel at the scene of the emergency who is most medically qualified. Authority to provide EMS lies with the emergency medical technician (EMT) or paramedic (EMT-P) who initiates patient health care management. In the absence of these licensed or certified health care personnel authority shall be vested in the most appropriate medically qualified representative of public safety. All personnel will hand off authority for patient health care management to any arriving EMS provider authorized at a higher level, including flight paramedics/registered nurses (RN), when medically appropriate.

2. Having accepted authority for patient health care management, public safety personnel authorized at the same level as EMS transport personnel will hand off individual patients as soon as possible and/or when medically appropriate. The authority for each patient passes with completion of the verbal handoff report and acceptance of the transfer of care.
3. If there is a disagreement regarding patient care while on scene of an incident, EMS personnel shall work professionally and collaboratively to find a solution. If EMS personnel still cannot agree on patient care, Base Hospital contact shall be made, and orders followed.
4. In the situation when EMS transport personnel have accepted authority for management of the multi-patient scene, they will pass this authority to any arriving public safety personnel and with appropriate information exchange.

C. AUTHORITY FOR PATIENT DISPOSITION

1. Patient disposition, destination, and mode of transport (ground/air) are indicated by patient's preference, clinical needs, and operational requirements. In all cases, EMS personnel, and base hospitals when included, are responsible to collaboratively determine the medically appropriate patient disposition and to advise the incident commander (IC) of this conclusion. However, when there is disagreement, destination is primarily a medical decision. As such, EMS personnel will comply with medical direction regarding destination, whether by protocol or base hospital order. Similarly, when there is disagreement, mode of transport is primarily an operational decision. As such, EMS personnel will comply with operational direction from the IC regarding mode of transport collaborate or consult with the IC regarding mode of transport.

D. COMMUNICATIONS

1. Upon dispatch, EMS transport personnel shall immediately monitor the fire command/tactical frequencies as assigned by the authority having jurisdiction (AHJ). All communication related to the incident shall be on the fire command/tactical channels assigned by the AHJ. EMS transport personnel shall respond to all AHJ radio communications if hailed while en route, on scene of, or staging for an incident. While on scene of an incident, EMS transport personnel shall bring their fire radio to the scene and on the appropriate command/tactical channel. Clear text communication shall be utilized during radio communications with AHJ. EMS transport personnel will switch back to their dispatch frequency upon transporting a patient or becoming available.

E. UNIT IDENTIFICATION

1. All EMS Transport Units shall have their radio identifier (ie M11, M31, etc) displayed on 4 sides of the ambulance in at least 4" tall numbers.
2. All EMS Transport Personnel shall have the radio identifier of their Ambulance displayed on both sides of their helmet.

F. MEDICALLY TRAINED BYSTANDERS

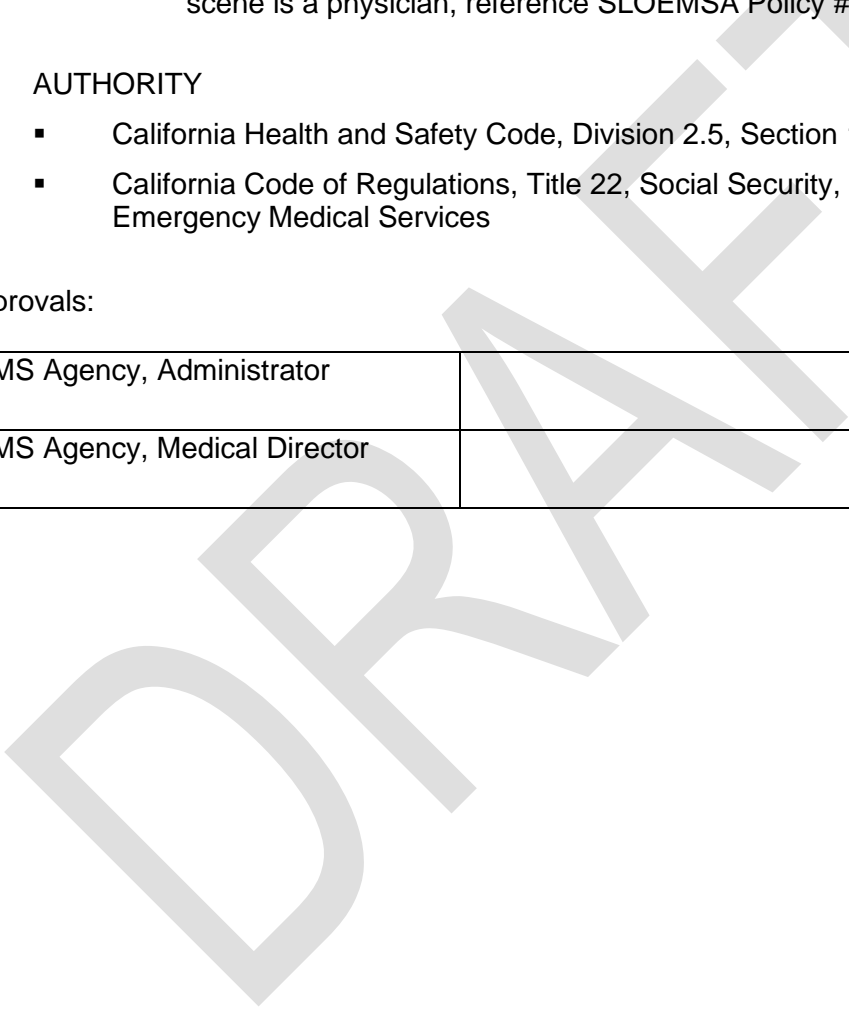

1. When a bystander at the scene of an emergency identifies themselves as a registered nurse, off-duty EMS, or other medical professionals, emergency medical services personnel may request documentation of medical expertise (i.e., medical license or appropriate certificate) to determine the person's area of medical expertise and if appropriate, request their assistance with patient care. Emergency medical services personnel may allow correctly identified medical personnel to assist with patient care in an advisory or BLS capacity but shall maintain overall patient management. Emergency medical services personnel shall document on the patient care report the individual's name and medical qualifications if such assistance was utilized. If the bystander on scene is a physician, reference SLOEMSA Policy #217: Physician On-Scene.

III. AUTHORITY

- California Health and Safety Code, Division 2.5, Section 1797 – 1799.207
- California Code of Regulations, Title 22, Social Security, Division 9, Prehospital Emergency Medical Services

Approvals:

EMS Agency, Administrator	
EMS Agency, Medical Director	

POLICY #217: PHYSICIAN ON-SCENE

I. POLICY

- A. In accordance with established procedures, appropriate emergency medical service personnel may utilize the assistance of an “on-scene” physician in patient care within San Luis Obispo County.

II. PROCEDURE

- A. When at the scene of a call, if an individual offers their assistance and introduces themselves as a licensed physician in the State of California, emergency medical services personnel shall:
1. If emergency medical services personnel do not know the physician’s identity, request identification. If the patient is in extremis, defer any procedure for identification and immediately allow the physician to assist or direct patient care to the level that the physician desires.
 2. Provide the physician the opportunity to read the California Medical Association “Note to Physicians on Involvement with EMS personnel” card/ Policy #217 Attachment A and describe for the physician the three levels of possible physician involvement.
 3. Advise the base hospital physician of the situation and of the on-scene physician’s level of involvement.
 4. If appropriate, allow the physician to speak with the base hospital physician.
 5. Follow the direction of the base hospital.
 6. In cases of controversy between the on-scene physician and emergency medical services personnel regarding patient care, the base hospital physician will be the final arbitrator for medical direction of the paramedic.
- B. Options for Physician Assistance Include:
1. Offers Assistance Only- A physician may offer BLS level assistance as another pair of eyes or hands or in making suggestions but allows medical direction to remain with the base hospital or standard SLOEMSA prehospital protocols. In this situation, prehospital personnel shall follow their normal operational policies and procedures.
 2. Offers Medical Advice and Assistance- A physician may request to speak to the base hospital physician and offer medical advice and assistance. In this situation, prehospital personnel shall follow the direction of the base hospital physician.
 3. Takes Total Responsibility- A physician may take total responsibility for the care given to the patient and, if safety allows, physically accompany the patient until the patient arrives at a hospital, and the receiving physician assumes responsibility.

C. Physician Request to Utilize ALS Drug or Equipment

If a physician at the scene of a patient in extremis requests to use the prehospital unit's drug and/or equipment inventory, the requested drugs and/or equipment should be made available immediately. If a physician at the scene of a stable patient request to use the prehospital unit's drug and/or equipment inventory, the requested drugs and/or equipment should be made available after the physician is either recognized by the prehospital personnel or provides appropriate identification.

D. Role of the Paramedic

ALS personnel shall function within their accredited scope of practice only. Initially, ALS personnel should provide care identified in the "standing orders" portion of the paramedic treatment protocols. The base hospital physician should be immediately notified and informed of the patient's progress and treatment being provided. If the on-scene physician is requesting ALS personnel to perform treatment outside the accredited scope of practice or treatment only allowed with base hospital approval, ALS personnel should inform the physician of their limitations and the need to notify the base hospital physician.

The base hospital physician may direct ALS personnel to actively assist the physician as appropriate with patient care. The on-scene physician shall sign the Prehospital Care Report for all instructions given.

III. AUTHORITY

- Health and Safety Code, Division 2.5, Sections 1798 & 1798.6
- California Code of Regulations, Title 22, Division 9, Section 100175

IV. ATTACHMENTS

A. Note to Physicians on Involvement with EMS personnel

Approvals:

EMS Agency, Administrator	
EMS Agency, Medical Director	

NOTE TO PHYSICIANS ON INVOLVEMENT WITH EMS PERSONNEL CARD

STATE OF CALIFORNIA

FRONT

BACK

**NOTE TO PHYSICIANS ON INVOLVEMENT WITH
EMS PERSONNEL**

EMS personnel operate under standard policies and procedures developed by the Local EMS Agency and approved by their Medical Director under Authority of Division 2.5 of the California Health and Safety Code. The drugs they carry and procedures they can do are restricted by law and local policy.

If you want to assist, this can only be done through one of the alternatives listed on the back of this card. These alternatives have been endorsed by CMA, State EMS Authority and CCLHO.

Assistance rendered in the endorsed fashion, without compensation, is covered by the protection of the "Good Samaritan Code" (see Business and Professional Code, Sections 2144, 2395-2298 and Health and Safety Code, Section 1799.104).

**ENDORSED ALTERNATIVES FOR PHYSICIAN
INVOLVEMENT**

After identifying yourself by name as a physician licensed in the State of California, and, if requested, showing proof of identity, you may choose one of the following:

1. Offer your assistance with another pair of eyes, hands or suggestions, but let EMS personnel remain under base hospital control; or,
2. Request to talk to the base station physician and directly offer your medical advice and assistance; or,
3. Take total responsibility for the care given by EMS personnel and physically accompany the patient until the patient arrives at a hospital (if safety allows) and responsibility is assumed by the receiving physician. In addition, you must sign for all instructions given in accordance with local policy and procedures.

DRM
