ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

To whom it may concern

I am writing with some comments regarding the Dana Reserve draft EIR just received via email. I live in the adjacent neighborhood on Glenhaven very close to Hetrick Road bordering the Dana Reserve project. Firstly, I would like to say that this project will significantly impact the local neighborhood not only with traffic increase through the neighborhood but with lighting and noise and will not blend into the current rural area.

The roads in our neighborhood are currently used as a short cut by traffic from Pomeroy to Willow rather than traffic staying on Pomeroy to the traffic signal and then onto Willow. Our street and is already impacted by trucks and school buses in violation of the weight restriction and other traffic. All traffic also ignores the stop sign at the intersection of Ten Oaks and Glenhaven and many traffic collisions have occurred there, and several vehicles have crashed into fences and ended up in yards during the night. Hetrick is only 20 ft. wide and posted 15 mph as there is a severe hairpin turn at the corner of Hetrick and Glenhaven place. In REC impact 2 of the draft, it states that there will be no increased use of the existing neighborhood however I disagree as it is estimated over 400-600 resident will be trying to exit the project each day, most onto Willow, controlled by only a stop sign, and then onward to access the freeway. This will inevitably cause backups through the project and housing so people will start using or continue using alternative existing route through our neighborhood. I believe the 20 ft wide Hetrick road with a very unsafe hairpin turn at Hetrick Road and Glenhaven should be closed to through traffic this would avoid the traffic increase in our neighborhood and allow residents to safely access the proposed amenities available in the project. Currently there are no sidewalks or bike lanes on Hetrick, Glenhaven or Ten Oaks (which was supposed to be added as stated in the traffic circulation long term goals for Hetrick)

I noted on the draft it states the lighting from the project will not significantly impact the existing area, not sure how that can be the case when building and lighting over 1200 homes and creating 2 lighted collector roads when currently there is no street lighting in the surrounding area or roads

Also, on the report is stated the aim is for the project to blend with the neighborhood however all the surrounding residence are on at least 1 acre lots, but the largest Dana Reserve lot is 7800 sq ft which is 8 houses per acre with the rest on smaller lots so this will no way blends into the area. There appears to be a better Alternative plan 5 in the EIR to creating a gradual transition along the fringe areas

I read on the EIR (AES impact 3) that there would be a visual screen put in place shielding the homes on the east side of the project from the 101 freeway. I do believe a visual screen, possible leaving the existing oaks and grassland in place, should be established between the current neighborhood on Hetrick and this large residential project

WF impact 8 of the draft states there would be no risk of flooding however currently after a rain the water travel downhill adjacent to the project on Hetrick like a river and onto Glenhaven and even cuts through our yard causing significant flooding. We have call SLO county on this issue but are unwilling to change the grading or add drainage in the roadway

These above comments are just a few items that I noted from the draft but do know that many elderly neighbors agree with the issues stated above and are not in favor of the project but do not have the ability to use email. Last April, we as a neighborhood submitted a petition signed by over 30 neighbors who are against the project and asking for Hetrick to be closed to minimized traffic. This was sent to Public Works department and to the Board of Supervisors. I request to be kept apprised of any development or upcoming meetings and that my comment be noted and considered

Thank you

Alison Martinez

Subject: Dana Reserve Draft Environmental Impact Report - Notice of Availability

Good morning,

*Please find attached the official **Notice of Availability for the Dana Reserve Draft Environmental Impact Report**. Please note, the public comment period closes on August 1, 2022. Thank you.*

*Jennifer Guetschow
Project Manager*

NOTICE OF AVAILABILITY

DRAFT ENVIRONMENTAL IMPACT REPORT

WHO: County of San Luis Obispo Department of Planning and Building

WHAT: A Draft Environmental Impact Report (DEIR) for the *Dana Reserve Specific Plan (PLN-1118, SUB2020-00047, LRP2020-00007, ED21-094)* is complete and available for public review and comment. The document addresses the environmental impacts that may be associated with activities related to the adoption of the Dana Reserve Specific Plan (DRSP), including adoption of the Specific Plan, Conditional Use Permit for Oak Tree Removal and Grading/Impervious Surfaces, Vesting Tentative Tract Map (VTTM) 3159, Development Agreement, annexation into the Nipomo Community Services District's (NCS D) service area for provision of water and wastewater services, and a County-initiated General Plan Amendment to change the land use categories within the Specific Plan Area and reflect the proposed incorporation of the Specific Plan Area into the Nipomo Urban Reserve Line (URL). The *Dana Reserve Specific Plan* is a primarily residential project with a majority of the Specific Plan Area designated for residential uses, which would accommodate up to 1,289 single- and multi-family residential units. The DRSP would also allow for the future phased development of village and flex commercial uses (including a hotel, educational/training facilities, and retail/light industrial uses), open space, trails, and a public neighborhood park within the Specific Plan Area. State Clearinghouse #2021060558.

The Specific Plan Area is within the Residential Rural land use category on three adjoining parcels totaling approximately 288 acres, including Assessor's Parcel Numbers (APNs) 091-301-030, 091-301-031, and 091-301-073, and is adjacent to the northern boundary of the Nipomo Urban Reserve Line and NCS D service area. The project site evaluated in the EIR also includes offsite water, wastewater, and

transportation improvement areas located within the vicinity of the Specific Plan Area.

WHERE: The DEIR is available for review or downloading on the Planning Department's web site at: <https://www.slocounty.ca.gov/Departments/Planning-Building/Grid-Items/Community-Engagement/Active-Planning-Projects/Dana-Reserve-Specific-Plan.aspx>. Copies of the DEIR, and all documents referenced in the DEIR, are also available for review at the County Department of Planning & Building, 976 Osos St., Rm 300, San Luis Obispo. Due to COVID-19 restrictions, it is recommended that you

contact the project manager (contact information below) to arrange for an appointment. A copy of the DEIR is also available for review at the Nipomo Library (see SLOLIBRARY.org for hours and COVID-19 requirements).

HOW TO COMMENT OR GET MORE INFORMATION:

Anyone interested in commenting on the DEIR should email your comments or questions to: jGuetschow@co.slo.ca.us or submit a written statement directed to Jennifer Guetschow of the San Luis Obispo County Department of Planning and Building at 976 Osos St., Rm 300, San Luis Obispo, CA 93408. Comments must be received between **June 16, 2022** and **August 1, 2022**.

If you need more information about this project, please contact Jennifer Guetschow at (805) 788- 2352.

ENVIRONMENTAL IMPACTS:

The EIR focuses on the following issues: Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, Utilities and Service Systems, and Wildfire.

Per CEQA Section 15087(c)(6), based on a search of the California Department of Toxic Substance Control's EnviroStor database, the State Water Resources Control Board's GeoTracker database, and CalEPA's Cortese List website, there is one open cleanup program site located within the offsite water system improvement area near the Tefft and Carrillo Streets intersection.

<<https://geotracker.waterboards.ca.gov/>>.

PUBLIC STUDY SESSION

The project will be presented at a public study session before the San Luis Obispo County Planning Commission on July 14, 2022, beginning at 9:00 a.m. Planning Commission meetings are currently being held virtually. For information on how to attend virtually (via Zoom platform), refer to the agenda on the Planning Commission Meetings website: <https://www.slocounty.ca.gov/Departments/Planning-Building/Grid-Items/Meetings,-Hearings,-Agendas,-and-Minutes/Planning-Commission-Meetings.aspx>. **This date is potentially subject to change.**

The project is also planned to be presented at a public study session before the San Luis Obispo County Local Agency Formation Commission (LAFCO) on July 21st, beginning at 9:00 a.m. LAFCO meetings may be held virtually. For information on how to attend the LAFCO study session, refer to the agenda on the LAFCO meetings website: <https://www.slolafco.com/commission-meetings>. **This date is potentially subject to change.**

To: Jennifer Guetschow <jGuetschow@co.slo.ca.us>

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

To whom it may concern,

I have read the report and I have some concerns regarding the draft EIR. This high-density housing project will no doubt have a significant impact on my neighborhood, yet the claims on the EIR clearly states that there will be no significant impact on the surrounding area.

Let's start with traffic on Ten Oaks, Glenhaven, and Hetrick. With the addition of nearly 1300 new residences and only two commuter roads through the project going to Willow Road, I believe traffic will get backed up and residents will be searching for an alternate manner to get to Willow Rd which will be through my neighborhood. These roads cannot safely host the current traffic much less any increase, which I am sure will increase due to this project. Hetrick, Glenhaven and Ten Oaks have no sidewalks or bike paths and the dangerous roadway is too narrow to have room to add such safety features. An alternative would be to close the street at Glenhaven and Hetrick which would require traffic to stay on Pomeroy to reach Willow Rd. The increased population for nearly 1300 residences will greatly increase traffic and the safety of the residents in the surrounding area.

Currently, Hetrick is bordered by 288 acres of open land filled with oak trees and grassland with great vistas and mountain views. Adjacent to this area are homes set on one acre lots. Placing nearly 1300 new residences on this beautiful land and eliminating a large number of mature oaks will cause much destruction to the neighborhood and surrounding area of Nipomo

I could continue to comment about the many points in the EIR which claims there would be no significant impact on the surrounding community but if you lived in the neighborhood, you would acknowledge this is not a true statement. Obviously, no one has spoken to anyone in the neighborhood or come and visited the area with these things in mind. All neighbors are very upset and distressed about this project and will continue to express their concerns at any upcoming meetings. Please send me the Zoom link when it is available for the July 14 public study session.

Regards,

Jose Martinez

Dear Jennifer,

As a Nipomo resident, I am wondering what accommodations will be made in order to absorb the additional access/egress with regard to the Dana Reserve plan?

Thank you,

Denise Barilla

To: Jennifer Guetschow <jGuetschow@co.slo.ca.us>

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

I just finished listening to the Zoom presentation.

I have quite a few concerns that I want to voice. Please bare with me here :) This won't be short lol

- The impact on the wildlife, which I don't believe was addressed, I fear will be very destructive. Removing 4,000 mature oak trees seems crazy to me. We love our oak trees. They provide habitats to many different animals, including our amazing raptors. Here is a link to a short 4 minute video where a docent explains why Oak Trees are so important for our wildlife. <https://www.youtube.com/watch?v=iYP-RXqbvm0>

Coyotes, deer, squirrels, opossums, skunks, raccoons are just a few of the animals that will be impacted. Now add to that all of the birds that will be impacted with the removal of the trees where they nest.

I don't agree with the idea that we should be pushing out wildlife for humans. We've already done that in Nipomo and we are already feeling the detriment of the removal of all of the Eucalyptus trees for the building of Trilogy. Plus people know want to kill the wildlife that is trying to maintain an existence here because those that move here find them to be a nuisance. Won't the same thing happen here?

- Population problems. This will increase our population quickly! 1300 homes, some of which are multi family!! If you go best case scenario there will be say 5 people per household. That would be 6500 more people into an already badly impacted area. Tefft is a nightmare still, we have 1 grocery store, 3 gas stations, 2 pharmacies, and of course no real sheriff station and 1 fire station. This just seems way too large of a project for Nipomo to handle (or want).

- It won't match the rural area we all moved here for. A lot of people here moved from So Cal to get away from exactly what seems to be projected. Tightly packed cookie cutter homes. I highly suggest lowering the number of homes, and increasing the property per house. I left an area where we were on about 1/4 or so of an acre. I think to match the homes that surround it, the homes should be situated on 1/2 acres lots.

- Water water water!!! Severe drought doesn't seem like building something of this magnitude is smart.

- Traffic - obviously this will increase traffic locally and as I already stated, we are struggling already with our current population.

- Schools - our schools are already heavily full. Are you planning on building a new Elementary School? Middle School? High School? We honestly do not have the funds now to support our school kids. My son grew up here and went through the local public schools from Nipomo Elementary through NHS. Nipomo High School especially was lacking in classes for the kids. All of his classes all through his education were very full. Adding a large group of children to this area again, doesn't seem smart.

I really could go on and on.

What it basically comes down to is, I think that this project is way to large for Nipomo to handle currently (or ever honestly). Way too dense for certain. Will have negative impacts on the local wildlife and losing all of those Oak Trees seems unconscionable.

I would cut the housing at least by half, put them on larger lots, and hopefully have all of them equipped with solar energy.

It would be nice to keep our *small town feel*, provide homes for families for sure. But this IMHO should be done on a much smaller scale housing wise. Work around the trees! Work around the wildlife! Not the other way around.

Thanks so much for taking the time to read through my concerns.

Beth Ralston
Resident here since 1998

RE: Comments on Dana Reserve / Canada Ranch development project in Nipomo

I have nothing much to add to my comments, which I provided in July 2021 (I was then in Ukraine and corresponded from the territory of Ukraine).

In June-July 2022, I studied new County documents that were made available to the public, as well as lobbying materials that interested parties publish in the media. In this regard, I would like to make a few additional comments.

SOURCE: “The Dana Reserve development plan has secured a piece of land on which they will put a permanent conservation easement. The land has between 10,600 and 14,000 trees. “So, altogether, we will permanently conserving about between 4 and 5 trees for every one that we remove,” said Tompkins”

KSBY California Central Coast, June 12,2022

MY COMMENT: If follow the logic of this article in the Internet edition, then the destruction of 288 acres of a unique oak forest with unique habitats on flat terrain next to 101 Freeway (which has no analogues from Los Angeles to Monterrey) is fully compensated by the "permanent conservation" of an another oak forest site in a mountainous area, where no one lives and no one travels, and where nothing threatens nature even without "conservation".

I cannot agree with the above concept.

After all, the initiators of Dana Reserve are not talking about planting new trees or other real. tangible and costly mitigation measures.

They are trying to solve their issue exclusively in a pseudo-legal, "paperwork" way.

In my opinion, this is unacceptable.

SOURCE: BIO-7.1: Nesting Bird Preconstruction Survey and Nest Avoidance. Within 1 week prior to ground-disturbing activities, if work occurs between February 1 and September 15, nesting bird surveys shall be conducted... The biologist shall collect data on the birds’ baseline behavior and their tolerance to disturbance by observing the birds at the nest prior to construction activities. If the birds are incubating, the biologist shall record how frequently adults deliver food and visit the nest. The biologist shall also record the birds’ reaction to the biologist and how close the biologist can get to the nest before the birds’ behavior is altered or they show signs of stress or disturbance.

Dana Reserve Executive Summary Report, Mitigation Measures, Page 21

MY COMMENT: It's funny to read this against the background of plans to destroy a unique natural habitat in 288 acres of oak forest (when it is obvious that the global construction works here will last about 5 years, after which the inhabitants of 1200 dwellings will not leave birds any chance to nest here). The authors of this text probably expected that no one would study this text.

SOURCE: PROJECT ALTERNATIVES

Burton Mesa Chaparral Avoidance Alternative. Under this potential alternative, proposed development would be limited to the eastern portion of the project site by increasing the density of proposed single-family residential dwellings, multi-family residential dwellings, and proposed commercial development in the eastern portion of the site and reducing the area of proposed buildout, particularly in sensitive areas of biological resources in the western portion of the Specific Plan Area, including areas supporting Burton Mesa chaparral. While the Burton Mesa Chaparral Avoidance Alternative would substantially avoid and reduce impacts to biological resources and reduce air pollutant and GHG emissions, reduce vehicle miles traveled (VMT), reduce unplanned population growth, and improve project consistency with applicable plans and policies, this alternative would not reduce significant impacts related to aesthetic resources and would potentially increase impacts associated with compatibility with the surrounding areas. Further, this alternative would not meet all of the basic project objectives, such as providing a diversity of housing types, including affordable homes, and connecting on-site residential neighborhoods to the community through development of pedestrian, bicycle, and equestrian trails via Collector B and an on-site trail system in the majority of the Specific Plan Area. **The Burton Mesa Chaparral Avoidance Alternative does not meet all of the basic project objectives and is likely infeasible from a cost perspective. It also has the potential to generate more severe and/or new potentially significant impacts; therefore, this alternative was eliminated from further review.** consistent with State CEQA Guidelines Section 15126.6(c).

Dana Reserve Executive Summary Report, Project Alternatives, Page 67

Residential Rural Development Alternative. This alternative would result in a future buildout scenario that is consistent with the existing Residential Rural (RR) land use designation for the project site. While this alternative would result in residential development in a manner that would be more consistent with the scale of adjacent residential land uses and would reduce air pollutant emissions, GHG emissions, VMT, and population growth, the **Residential Rural Development Alternative would not meet the basic project objectives related to providing a diversity of housing types, including affordable homes. This alternative also has the potential to increase impacts related to utilities and service systems. Therefore, the Residential Rural Development Alternative was eliminated from further discussion** in accordance with State CEQA Guidelines Section 15126.6(c).

Dana Reserve Executive Summary Report, Project Alternatives, Page 67

Exclusively Commercial/Retail Development Alternative. Under this alternative, the 288-acre project site would not be developed with residential uses and would instead be developed with flex

commercial and village commercial uses over 238.2 acres of the project site. While this alternative would reduce air pollutant emissions, GHG emissions, VMT, and population growth, the Exclusively Retail Development Alternative would not meet the basic project objectives and would be inconsistent with the General Plan. This alternative would not meet project objectives and County objectives (as defined in the County's MOU with the Applicant) related to providing a diversity of housing types, including affordable homes, and providing public parks. This alternative would continue to result in the loss of oak woodland, Burton Mesa chaparral, and other natural habitats and would alter the existing visual character of the project site. **This alternative may also be infeasible due to the project area's inability to support this significantly increased extent of commercial/retail uses. Since the Exclusively Commercial/Retail Development Alternative would not meet the basic project objectives, if potentially infeasible, and would not reduce all of the project's significant impacts, this alternative was eliminated from further consideration.** consistent with State CEQA Guidelines Section 15126.6(c).

Dana Reserve Executive Summary Report, Project Alternatives, Pages 67-68

Alternative Location Alternative. Under this alternative, the project would not be developed on the proposed 288-acre Dana Reserve and would be developed at another location within the county. An alternative location would need to be large enough to accommodate approximately 173 acres of residential land uses, including 831 residential single-family units, 458 residential multi-family units, and up to 152 ADUs; 22.3 acres of commercial land uses; 49.8 acres of open space; 21.9 acres of roadways; and 11 acres of public recreational facilities. **The applicant does not own alternative sites that could accommodate the proposed development; therefore, it is uncertain whether an alternative site would be feasible, successfully reduce the project's significant impacts, and meet the basic project objectives. Therefore, the Alternative Location Alternative was eliminated from further discussion** in accordance with State CEQA Guidelines Section 15126.6(c).

Dana Reserve Executive Summary Report, Project Alternatives, Page 67

The State CEQA Guidelines require an analysis of alternatives to identify an environmentally superior alternative among the alternatives evaluated in the EIR. The environmentally superior alternative is the alternative that would minimize adverse impacts to the environment. **Based on the evaluation of alternatives, the No Project Alternative would be the environmentally superior alternative because it would minimize the project's adverse impacts to the environment.** However, State CEQA Guidelines Section 15126.6(e)(2) states that if the No Project Alternative is also the environmentally superior alternative, the EIR should then identify an environmentally superior alternative among the other alternatives. Based on the detailed evaluation of project alternatives included in EIR Chapter 5, Alternatives Analysis, Alternative 3: the **Residential Rural Cluster Subdivision Alternative would be considered the environmentally superior alternative. Since residential development would be central to this alternative, this alternative would help the County reach its housing development allocation goals per the County RHNA required by state law.**

However, based on the clustered development and other site constraints, this alternative may not meet project goals for the provision of affordable market rate housing units. Therefore, Alternative 3 would reduce the project's significant impacts; however, it would not meet all of the project's objectives. Because it would most successfully reduce the number and extent of significant environmental impacts, and would meet more of the project's primary objectives than other alternatives, Alternative 3 is the Environmentally Superior Alternative.

Dana Reserve Executive Summary Report, Project Alternatives, Page 67

MY COMMENT: The language used in the above parts of the Executive Summary reflects the desire to comply with the rules. But the rules themselves are ambiguous and difficult to understand, as illustrated by the accompanying text **Cal. Code Regs. tit. 14 § 15126.6** (See Exhibit A below). Different judges may interpret these rules in different ways.

It is clear to me that based on the unilaterally interpreted State CEQA Guidelines Section 15126.6(c), the County has decided to reject all alternatives (for example, to force Dana Reserve to downsize development and limit it to parts of the site where there are no oaks; or find another location for 1200 dwellings where there are no ancient oaks). In pursuance of such an intention, the County determined that all alternatives were «eliminated from further review», «eliminated from further discussion», «eliminated from further consideration».

The Executive Summary Report contains the emphasis on how this project will help increase the number of housing for workforce and affordable housing in the County and overcome the housing crisis. Unfortunately, this argument is questionable under the circumstances. The fact is that in some cities such as Los Osos and Cambria, there are hundreds of empty plots of land due to the moratorium announced by the County on new construction. The reason for the moratorium is the shortage of water resources. If the County wants to overcome the housing crisis, then it is not necessary to destroy the unique oak forest in Nipomo. It is possible to lift the moratorium on the North of the County and thereby significantly relieve tension in the housing market. As for the water issue, if it turns out there is enough water for the new 1200 dwelling units in Dana Reserve, then there should be enough water for thousands of other houses that the residents of the County are now unable to build due to the moratorium announced by the County. There is a clear inconsistency here.

Another alternative is to designate another site for such a massive project. In my previous comments, I suggested to pay attention to several alternative sites that were sold at very reasonable prices. But there was no response to my suggestion to consider an alternative. And now there are several large areas without vegetation on the real estate market of San Luis Obispo County. Of course, these areas will have to be planted and money will be spent on this. It is clear that it is much easier to build a new village for profit in an already existing oak forest, which is hundreds of years old. But I can't agree with this logic.

CONCLUSION:

I don't want to look like an opponent of progress. I understand that the County wants new development. That is why, in my comments in July 2021, I proposed to the County an alternative site plan for Dana Reserve, which provided for the construction of a sufficient number of new houses in places where there are no oaks. This plan (diagram) has been carefully crafted and provided to the County. Unfortunately, I did not receive an answer.

It is obvious that a powerful train is moving forward and it is impossible to stop it or at least partially change the direction of its movement.

I can't stop this train by filing grievances.

But the proposed Dana Reserve project affects not only the interests of the population of Nipomo, but also my personal interests.

I am the only developer in the area of operation of Dana Reserve (although I am a developer of very small scale).

All the rest here are just residents, owners of houses.

They have no business intentions while I have planned a new small real estate development here, Villa Victoria Estates.

I am also building a large home on my parcel which is consistent with future subdivision.

I invested all my money into this subdivision/construction project.

I had a certain vision for the project; counting on the view to the oak forest from my site (I could not believe that in modern California someone would come up with the idea to destroy this unique oak forest).

Dana Reserve and the County ruin my plans.

Therefore, I ask you to attach my comments to the Dana Reserve (Canada Ranch) project review documentation. I reserve the right to defend my rights and interests by legal methods.

Once again I propose to reduce the appetites of Dana Reserve and force them to reduce the amount of development and only build where there are no oak trees (see my alternative site plan below, which I submitted first in July 2021).

Even in this scenario, the project will be sufficiently profitable for its owners/lobbyists.

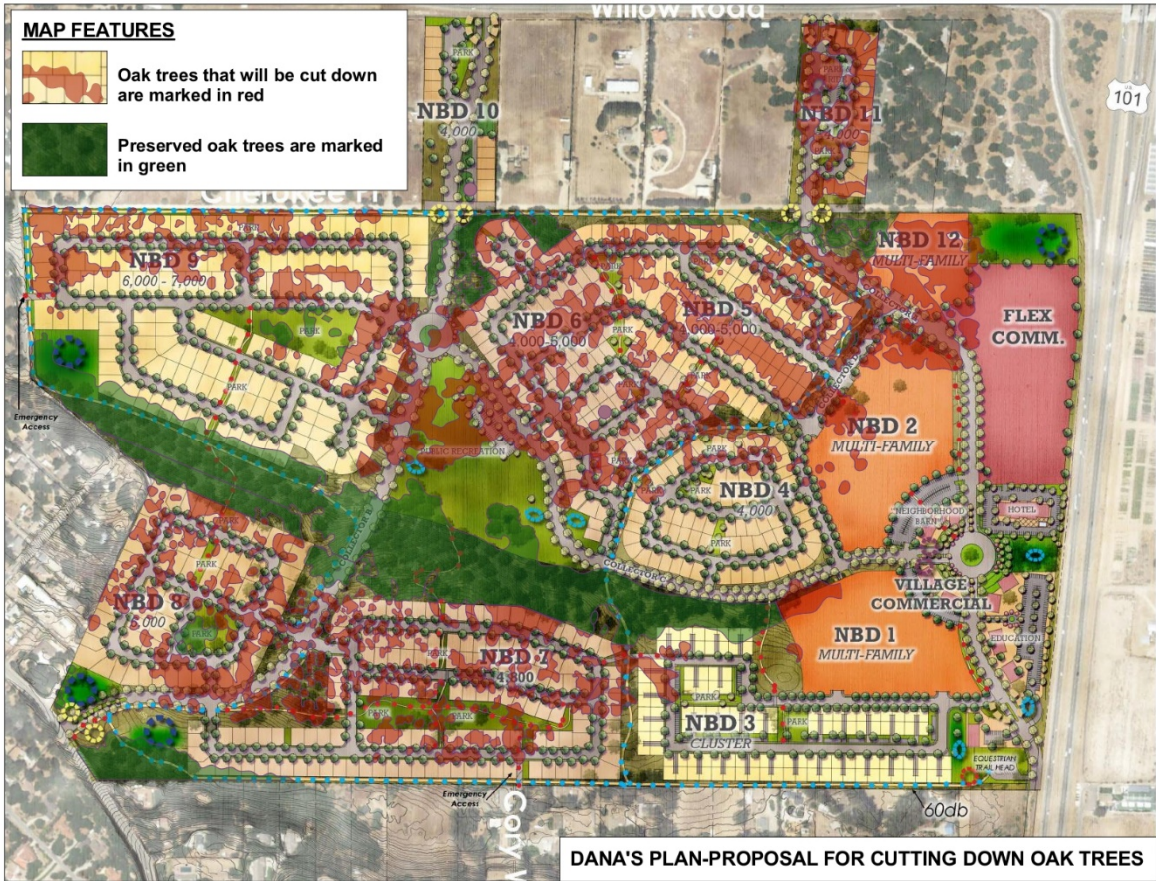

Everyone will benefit from such a decision, the nature of California, the County, the population of Nipomo, and the tens of millions of people who drive along Freeway 101.

Please see below Dana Reserve's plan and my alternative plan in comparison.

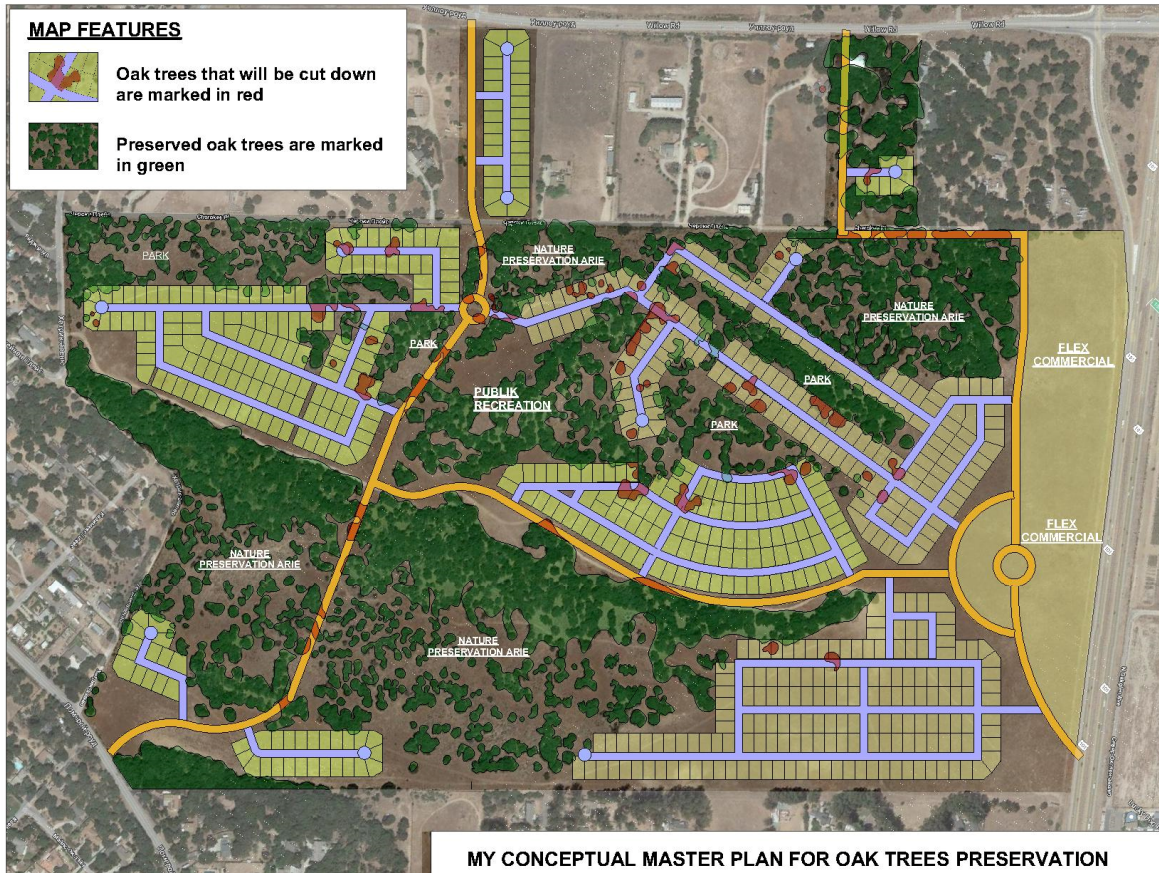

Plan proposed by developer

The impact of implementation of the plan proposed by developer

My alternative plan

Sincerely yours
 Alexander Glotov

EXHIBIT A

Cal. Code Regs. tit. 14 § 15126.6

Section 15126.6 - Consideration and Discussion of Alternatives to the Proposed Project

(a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially

feasible alternatives that will foster informed decision-making and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (Citizens of Goleta Valley v. Board of Supervisors(1990) 52 Cal.3d 553 and Laurel Heights Improvement Association v. Regents of the University of California(1988) 47 Cal.3d 376).

(b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.**(c) Selection of a range of reasonable alternatives.** The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:(i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.

(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (County of Inyo v. City of Los Angeles(1981) 124 Cal.App.3d 1).**(e) "No project" alternative.**

(1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125).

(2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.

If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

(3) A discussion of the "no project" alternative will usually proceed along one of two lines:

(A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or

operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan.

(B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.

(f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (*Citizens of Goleta Valley v. Board of Supervisors*(1990) 52 Cal.3d 553; see *Save Our Residential Environment v. City of West Hollywood*(1992) 9 Cal.App.4th 1745, 1753, fn. 1).**(2)** Alternative locations.

(A) Key question. The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.

(B) None feasible. If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in close proximity to natural resources at a given location.

(C) Limited new analysis required. Where a previous document has sufficiently analyzed a range of reasonable alternative locations and environmental impacts for projects with the same basic purpose, the lead agency should review the previous document. The EIR may rely on the previous

document to help it assess the feasibility of potential project alternatives to the extent the circumstances remain substantially the same as they relate to the alternative. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 573).**(3)** An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative. (*Residents Ad Hoc Stadium Committee v. Board of Trustees*(1979) 89 Cal. App.3d 274).

SLO Planning Commission
c/o Jennifer Guetschow; jguetschow@co.slo.ca.us

I am writing to express my concern regarding the Proposed Dana Reserve Project, a development project that will develop 288 acres in the Unincorporated County Community of Nipomo.

After reading the Draft Environmental Impact Report (DEIR), the Unmitigatable Significant Class 1 issue which concerns me most is (circle item/highlight or write in your greatest concern):

- Housing (imbalanced housing vs job creation, which also increases traffic)
- Transportation (increase traffic, impacts on many roads throughout Nipomo)
- Air Quality
- Greenhouse Gas Emission
- Land Planning (multiple elements of the project are out of alignment with the south county area plan, including how this land was intended to be developed vs the present project)
 - Biological impacts (3,948 oak trees to be removed, federally endangered species to be removed, special habitats to be removed)
 - Write in other issues of concern (i.e Water, public services) not determined to be a class 1 issue in the EIR

Water & public service

* AGAIN, Nipomo is bringing \$ to the county of SLO, but \$ is not coming back to the Nipomo community
The limited social and economic benefits of the Dana Reserve Project will not outweigh the many significant impacts of the project. As a citizen of Nipomo, I ask that this project be denied until revised to such an extent that the impacts of the development are greatly decreased. We owe it to Nipomo to present a project that does not significantly decrease the quality of life for existing residents and retains the natural beauty of the land given to Captain Dana in 1837.

[EXT]Comments on DEIR for Dana Reserve Specific Plan

chris santala <chris.santala@gmail.com>

To: Jennifer Guetschow <jGuetschow@co.slo.ca.us>

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Hello Jennifer,

I am a member of the Nipomo Action Committee, a group recently formed to voice our concerns for the proposed Dana Reserve Development. My specific comments on the DEIR are as follows:

1. Reduce the density of the housing/infrastructure to minimize oak tree, air, traffic, and noise impacts.
2. Why are only 194 oaks (of the ~4,000) being counted towards replacement planting of 4:1? I see that the majority of the oak mitigation is *preservation* of oaks at "Dana Ridge". Seems to be a lenient oak impact mitigation strategy. More individual oaks should be included in replacement planting to minimize the loss of oak woodland habitat On-Site. If the housing density is reduced (#1 above), there will be more space to plant oaks onsite.
3. If current oak mitigation strategy goes through - I suggest allowing public access (trails) to create a "Dana Ridge Preserve", similar to the Pismo Preserve. In the future, other landowners could add property to Dana Ridge Preserve, possibly even connecting to the Dana Adobe.
4. Require the developer to construct a separate/ protected bike/pedestrian path to Nipomo High School, the Nipomo Community Park, and "Uptown". The reason is to create a community connection to the rest of Nipomo (not just more roads), and to reduce automobile use. Without "connection" this is just another giant development forced into unincorporated Nipomo because the cities of SLO, Pismo, Paso, AG etc don't want "affordable housing" or any other massive projects in their backyard. The County has the power to help improve Nipomo and make it an example of how we can create communities that are connected and bike and pedestrian friendly.

Thank you,
Chris

Over building Nipomo has shown to be a detriment to our community. I have lived in Nipomo for 30 years, and seen it go from a quaint town to a overbuilt congested cluster of bland name brand stores. If this is being planned by the same people who were responsible for the approval of the new shopping center on the old Rec Center site, than the new Dana Reserve project should be terminated immediately. Stop destroying Nipomo, stop destroying our community, this big city mindset has to end before Nipomo is ruined forever.

We lost our small town grocery store, we lost our local coffee shop, we lost our frontage road, we lost our ability to drive across town without traffic, we lost our town. Please end this over building, before it is impossible to still love Nipomo.

Subject:[EXT]Dana Reserve - We Oppose

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or

links.

Dear Ms. Guetschow,

We oppose the Dana Reserve Development Plan and wish to have our concern and opposition recognized. Our basic concerns include the following:

Traffic - ~4800 new residents in such a small space is going to create havoc on local traffic, particularly during commute times and school start/stop times. Ten Oaks, despite what local politicians claim, already has an excessive amount of traffic during those times...please note the traffic survey the county conducted on Ten Oaks was during Covid in July of 2020 so it does not reflect our "normal" traffic load. Additionally, the corner of Glenhaven and Hetrick is a hairpin turn, and very dangerous. Additional traffic is only going to make that turn even more treacherous. Please consider closing Hetrick/Glenhaven at the hairpin turn and opening Hetrick all the way through to Pomeroy so that the Pomeroy to Willow shortcut via Ten Oaks is no longer necessary. Opening Hetrick and closing Glenhaven eliminates the need to come to Ten Oaks.

Additionally, these homes are being proposed/marketed as being beneficial to workers and that residents would not need to contribute to traffic...that they can guarantee they would reduce vehicular trips. This is preposterous. The ratio of jobs per capita in Nipomo is lower than any other town in the county, and we are on the border of Santa Barbara county. If you build homes for workers here, they will have to commute. And they will be closer to jobs in Santa

Maria than in our own county. If these homes are truly for the "working class", then they should be built where the jobs are...further north, in the middle of the county! Otherwise, you're just housing Santa Maria's work force. It makes no sense, and it will definitely create more traffic on both the city streets and the highway.

Light, Noise and Air Pollution - the development plan is too dense, and will illuminate our night sky, and bring added noise and air pollution. Please require a large setback and extra tall natural screen along the western boundary against Hetrick and reduce the number of homes.

Devaluation of real estate in adjacent neighborhood - our homes on Ten Oaks are worth \$1M+ and all sit on approximately one acre or more. The new residences are dense housing, even the "larger" homes, and are not of like kind to the adjacent neighborhood. This will devalue our homes. While I understand this is a "not in my backyard" argument, the devaluation of our neighborhood will impact Nipomo as a whole. Please significantly reduce the number of homes and require larger lots so that they are of like kind to the surrounding established neighborhoods.

Water requirements in severe drought - given the current state of our State with regard to water use and mandates due to drought, we do not trust the agreement with Santa Maria to be enough of a guarantee that we will not be in a shortage when these new homes are added. Contracts are broken all the time and the water supply this project is relying upon does not even come from the same county. Santa Barbara county has no strong reason to support the water demands when severe shortages become an issue. They will break the contract and supply Santa Barbara county residents first.

Electrical grid stress - the addition of 1,289 all electric homes will bring more brown outs to our area. We all know PG&E has severe issues already. Please reduce the amount of homes to reduce the strain on our electrical grid and keep us all powered up.

Stress on emergency services and infrastructure - More people to service means we need more Sheriff, Fire, Paramedics, etc. They are already stretched very thin. Please reduce the number of new residences. With a 25% increase to our population with only one development, the town is not ready to support the residents. We currently only have one grocery store, and it is already overtaxed and understocked...try stopping by for milk on a Sunday afternoon. We are already underserved, please don't make it worse! And PLEASE do not put a fire or police station in the development!

Devastation to Flora and Fauna - we are not botanists or arborists, but we do love our oaks and native plant life. We believe the DEIR is filled with half truths and glossing over the real devastation that will happen to the Dana Reserve and how it will impact our wildlife and Nipomo as a whole. The plan, as it currently stands, will exterminate federally protected native plants that cannot be replaced and KILL approximately 4,000 "protected" oaks without proper mediation. The mediation plan bases the "preservation" off of 197 oaks, not 4,000, and it will be in another location across the freeway...none of this makes sense. For those of us that also own many of these large OLD oak trees (ours are estimated to be about 300 years old!) and do everything in our power to make sure they continue to live long healthy lives, it makes no sense that the developer is allowed to destroy SO many! We cannot even begin to fathom what level of destruction of local wildlife habitat and the wildlife itself this will bring. It is heart wrenching. Please do not devastate the landscape so drastically. Please reduce the development.

It seems that this project is a pipe dream filled with all sorts of hollow promises and glosses over the real damage that will be done. How does it make any sense at all to increase the population of Nipomo by 25% in ONE project that is on only 288 acres. Who would ever think that is a good idea? This project is much too large for the space, does not fit the community character or needs, and brings multiple types of devastation to our community. We implore you to please take these things into serious consideration and require the developer to make some drastic changes to the existing plan.

Thank you for your consideration,

Dave and Sandy Christiansen

Subject: [EXT]Dana Reserve Concerns

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

In my opinion there are several issues with the proposed Dana Reserve. The present infrastructure in Nipomo cannot support such large growth. Already in the mornings and weekend afternoons Tefft Street is at a standstill from Mary to the 101 Interchange. A few years ago, it was deemed the most congested intersection in the county. Some re-aligning and improvements have been done since then but it is still far from being noncongested. The North Frontage Road needs to be four lanes throughout to handle the present traffic plus the additional traffic this project will create. With the Frontage Road ending at Juniper all the traffic is going to have to turn on Juniper. Which is another road that cannot handle additional traffic. Some will turn again on Mary and some will continue down Juniper to Pomerory. To handle the additional traffic Juniper should be widened to four lanes, at least until Mary. Mary should be widened to four lanes with turn lanes between Juniper to Tefft. Even with the roads widened to four lanes, there still is going to be congestion because of all the intersections. The developer in his statements says he wants to ease traffic congestion by continuing the frontage road all the way to Willow. Continuing the frontage road to Willow will be nice for his development but the development will definitely compound an already congested Tefft as well as increase the traffic on the residential streets adjacent to his project. It seems a more viable option for the county, and one that would decrease the traffic on Tefft, would be to add a new freeway interchange halfway between Willow and Tefft. Also, with the expanded roadways there needs to be sidewalks and bike lanes added on all these roads. On the north side of the project is Cherokee Place. Presently it is a dead-end dirt road. This road is going to connect the North Frontage Road to Hetrick. It sounds like this road is going to be paved and is not meant to carry traffic. It will. It is going to be one of the main roadways to enter/exit the project from the northwest. The plan for this road is to just pave it. It needs to be a full two lanes with sidewalks and a bike lane.

The developer is touting how recreation fits into his development plan. There needs to be recreation access from the surrounding areas for the residents in the development as well as the residents living next to the development. Presently my wife and I walk down Cherokee Place because there is not any traffic on it. We want to be able to continue to safely walk on it. Without a sidewalk this will be dangerous. We want to be able to walk to all the new amenities this development will provide. All the above road improvements should be in place prior to the start of the project. It is not the existing resident's fault that a large development is proposed. Therefore, they should not be penalized for its implementation. Road infrastructure needs to be in place before the project begins.

Looking at the plan there does not appear to be enough on street parking for the number of houses being built. The high-density housing is just orange blobs on the plan that do not show how the housing is going to be placed nor the parking. The cluster housing shows the houses and the cluster roads which seem to be like the PUDs in the Five Cities. There is not enough parking for these residents. With the average family having 2 cars per household, I would propose that every residence should have a minimum of one additional parking space on the street besides what they can fit in their garages. Even the houses on the smaller lots need more on street parking. If you go and drive through the neighborhood of the development across the street from Jocko's down Thompson towards the high school, you will see how that area was developed without enough parking. I have a friend that lives in that neighborhood that must park on Thompson sometimes because there is not enough on street parking. Let's not repeat that problem.

Nipomo High School at capacity. Where are the high school students in this development going to go to school? Nipomo? When the school at capacity, adding that many new students will have a negative impact on the students/staff already there. The EIR states that the high school is 0.2 miles from the development. Which it is true if you could fly there. Unfortunately, direct access is blocked by a freeway, so they are going to either go to Tefft adding to the congestion or go to Willow. Again, there are no sidewalks along these busy roads so walking along them is not safe. It is too far for students to realistically walk. Same with elementary age school children. Where are they going to be going to school? There is room at Lange Elementary for 85 more students. What if there are (probably there will be) more than 85 elementary age children in this development? With schools running at or near capacity, there needs to be solutions in place before construction starts.

There is a park in the middle of the development. The developer wants the Quimby fees waived and does not want to maintain the park. The County Parks doesn't want to maintain it either. The other "Pocket Parks" and facilities will be maintained with homeowner association fees. How affordable is affordable housing when there are HOA fees in addition to mortgages? If the county does not maintain the park, then how much more will the HOA fees increase? Or will they say it is too expensive to have a park and just get rid of it? Since when are drainage basins considered parks?

In the EIR there is a section about water. There is going to be much water infrastructure improvement needed for this project to happen. Hopefully, the developer will need to bare the burden of this cost. It would not be fair to existing residents to pay for the water infrastructure for this project. The other large developments in Nipomo (Trilogy, Black Lake, Cypress Ridge) have had to install water recycling for their projects. This development's plan is to put in pipes to the edge of their property and say, oh well it's not our responsibility to go any farther. That is not a plan. The developer needs to develop a plan that uses the water on site at the pocket parks, park and other common areas or develop a plan that returns it to NCSD.

How can a development of this size be approved in the such a severe drought? Our own governor stood at Lopez Lake urging all Californians to cut water usage by 35%. Yet in Nipomo there seems to be a water surplus even though the NCSD has sent several letters to its customers urging them to conserve water. Depending on a city in a different county for water from its aquifer is not responsible. Even though it is contracted to be sent to Nipomo, if water in Santa Maria gets scarce you can bet they are going to serve their residents first and say sorry Nipomo. Has there been a comprehensive study done on Santa Maria's aquifer and how much is there? What are Santa Barbara County's development plans? Tying yourself to a different county makes you subject to their needs. Bad planning. Just the water needed for this project, should be enough to sideline it until other water sources are developed in SLO County.

There is an oak woodland ordinance in SLO County that was initiated because of the Justin Vineyard clearcutting of oak woodlands. This is the same type proposal. This is exactly why the ordinance was enacted. Please do not allow the removal of 3943 of the 5128 Coast Live Oaks on this property. The developer saying that preserving a piece of property not near the development, not accessible by the public, that is already too steep to develop is of equal importance. I say it is not. It already cannot be developed so preserving it from development is moot point. Burton Mesa Chaparral in San Luis Obispo County already not common. Destroying 36 acres of this limited resource does not make sense. If the developer wants to develop this parcel the they should mitigate it with preserving an adjacent piece of property on the mesa that contains 3943 oak trees and 36 acres of Burton Mesa Chaparral.

I have lived in the South County for over forty years and have seen the development. I have raised five children here and love this area. The social and economic benefits of this project do not even come close to the impacts. Thank you for giving me the opportunity to voice my concerns about the Dana Reserve. I would appreciate any feedback.

Sincerely,

Dan Stocks

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

My wife and I have lived near this proposed project since 1996. It used be quite here. No more. We used not worry about water. No more. As I understand this project they will be adding thousands of residences?? Where is that water coming from? This is a real bad idea and should be refused/rejected.

Nipomo needs to go slow on growth...its already up by nearly 10 fold since we moved here. SLO BOS needs to stop pushing things they dont want in SLO city area (like high density housing) on south county.

Response to EIR on Dana Reserve Project in Nipomo
File # LPR 2020-00007

My husband and I have been residents of Nipomo for almost 5 years. After living in two other areas of SLO county we settled on Nipomo primarily because of its rural character. I have reviewed the EIR and have several concerns about this project.

I use the Willow Street exit off the 101 almost exclusively to avoid heavier traffic on Tefft. Adding a development of 1,289 homes will have a substantial impact on traffic both getting on and off the freeway and then on Willow itself. Because of the traffic impact, there will also be an increase in automobile emissions.

I am very concerned about the increased water usage this project would cause. Our water is already rationed (watering only 2 days/week) causing most folks to give up landscaping altogether. Our water rates are also already high. Adding 1,289 additional users will have a significant impact—forcing us to find additional sources of water and having rates climb even higher. As retired seniors who have rain collection barrels, only shower every other day and reuse every drop of interior water, we are unwilling and actually unable to do much more especially in the way of money.

We love our area and its plant and animal life. Cutting down hundreds of mature live oak trees and the resultant habitats they provide is unconscionable. Even replanting with a 4:1 ration is not an answer. Young trees require lots of regular watering and some, despite even good care, will not survive. In addition, reptiles, bees and raptors, to name a few, will be displaced and need to find new homes. Also, the winds will lose a barrier (like when Trilogy cut all there trees down and caused an increased dust problem) which will no doubt increase dust in our air and further degrade air quality.

I commend the planning department in a very thorough study; however, quality of life in our county is surely giving way to increased population. If we as residents wanted to live in a congested area with traffic issues, we would have stayed in our previous communities. I believe one large housing development (such as Trilogy) is enough for our small community.

I sincerely appreciate your consideration.

[EXT]Dana Reserve Public Comment

Deanna T <scdeannad@hotmail.com>

Sat 7/16/2022 8:07 AM

To: Jennifer Guetschow <jGuetschow@co.slo.ca.us>

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Hello,

As an Arroyo Grande resident and a nearby neighbor (off Summit Station Road) to the proposed project site, I am writing today to express my concern and **strong opposition** to the Dana Reserve Project. This area is beautiful, peaceful, and home to abundant native wildlife. Our area also already struggles with air pollution, habitat loss, and adequate water supply. A project with such dense infill, high population and housing, and the increased traffic, noise, light pollution, and demand on resources it would bring does not belong here among our mostly open land and large (but sparsely developed) parcels. Given what is proposed, using the name "Reserve" is deceiving and conniving.

By looking over the EIR, it is obvious the project manager and those involved already know this. The proposed project would cause "significant impacts" to nearly every single environmental category or concern on the checklist: aesthetics, air quality, sensitive habitat, special-status animals and protected oaks, water resources, and is in conflict with state and/or local renewable energy, emergency response, and sustainable groundwater management plans. The negative impacts it would make would be **detrimental and permanent**, and are not able to be adequately mitigated. I urge you to look at all these factors and conclude that this project is **not suitable for the proposed site**.

Thank you very much for your concern and time.

Subject: Draft Environmental Impact Report (DEIR) for the Dana Reserve Specific Plan (DRSP)

Dear Ms. Guetschow,

These comments are submitted on behalf of the California Department of Parks and Recreation (State Parks), Oceano Dunes District, regarding the Draft Environmental Impact Report (DEIR) for the Dana Reserve Specific Plan (DRSP), herein referred to as the Project. State Parks appreciates this opportunity to provide comments regarding the DEIR.

State Parks is concerned that the DEIR does not sufficiently address the potential impacts to sustainable groundwater management of the Santa Maria Groundwater Basin (SMGB) and that continued groundwater pumping at current and/or increased levels will result in additional negative and cumulative impacts to sensitive wetland habitats and wetland dependent species, specifically within State Parks managed lands.

The Oceano Dunes District contains rare and diverse wildlife habitats and species many of which are dependent on an assemblage of wetlands, lagoons, and creeks influenced by the hydrology of the SMGB including lands within Nipomo Mesa Management Area (NMMA). These wetland features are already stressed from reduced groundwater levels resulting from chronic and seasonal groundwater overdraft and periodic drought. Multiple groundwater dependent dune slack wetlands within the Oceano Dunes District have disappeared or receded within recent years including Jack Lake, Lettuce Lake, and Surprise Lake. These and other affected wetlands have historically provided habitat for federally- and State- listed species including California red-legged frog (*Rana draytonii*), La Graciosa thistle (*Cirsium scariosum var. loncholepis*) and marsh sandwort (*Arenaria paludicola*). In addition, continuing the present amount of depletion of NMMA groundwater would likely contribute to further-reduced flows within both Oso Flaco Creek and Arroyo Grande Creek, resulting in additional wetland habitat loss including occupied habitat for federally and State listed tidewater goby (*Eucyclogobius newberryi*), steelhead (*Oncorhynchus mykiss*), California red-legged frog, and marsh sandwort.

Dana Reserve Specific Plan

Page 2 of 2

The DEIR states in Section 4.10.5 under HYD Impact 3 concerning groundwater that, “NMMA receives a minimum annual delivery volume of 2,500 AFY from the NSWP [Nipomo Supplemental Water Project]” and that “there is more than sufficient water available to meet or exceed the needs of the project.” State Parks is concerned that this is inconsistent with the findings from the [Nipomo Mesa Management Area 14th Annual Report – Calendar Year 2021 \(Submitted April 2022\)](#) which states on Page ES-2 that, “Severe Water Shortage Conditions continue to exist in the NMMA in CY 2021 as indicated by the lowest Key Wells Index on record of 8.7 ft msl” and that only “1,064 AF of imported water were delivered through the NSWP in CY 2021.”

Despite the SMGB court adjudication, it is clear from the Key Wells Index that the responses required under Severe Water Shortage Conditions have not been sufficient at reversing the groundwater depletion. State Parks is concerned that in addition to current level of groundwater extraction within the NMMA, lingering impacts from past groundwater extraction is resulting in severe depletion of groundwater supply, not only within the NMMA but also within the neighboring Northern Cities Management Area (NCMA) which directly, negatively impacts adjoining Arroyo Grande Creek and its tributary Los Berros Creek.

Under the Severe Water Shortage Condition that exists in the NMMA, no new demand should be added until this condition is permanently reversed. It is apparent that groundwater conditions are getting worse every year. Even if the Project does not require new groundwater pumping, as the DEIR claims, in order to protect essential wetland resources within the SMGB it is apparent that the NMMA needs to pump less groundwater in the future and instead use any additional NSWP supply to make up for the recurring well-documented shortfall.

Thank you for the opportunity to submit comments for this DEIR. We look forward to working with San Luis Obispo County Department of Planning and Building and other partners to ensure that the environmental review fulfills the requirements of State and federal law so that essential wetland habitat will not be impacted.

You may follow up with Ben Wagner, Senior Environmental Scientist (Specialist) at ben.wagner@parks.ca.gov, or by phone at (805) 574-4587.

Mon 7/18/2022 12:52 PM

To: Jennifer Guetschow <jGuetschow@co.slo.ca.us>

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Hi all,

In accordance with Water Code section 12899, DWR regulates the use of DWR right of way by third parties through the issuance of an encroachment permit. The permit process requires the submission of plan drawings signed and stamped by a registered engineer for review and approval by DWR in accordance with California Code of Regulations, Title 23, Chapter 6 Articles 1 -10. Please visit the DWR website link below for links to the Regulations and the Encroachment Permit application. Please note the Regulations spell out the minimum requirements used by DWR to ensure the safety and integrity of the State Water Project when reviewing proposed drawings. The application has 4 requirements, including evidence of CEQA compliance, that must be submitted before DWR will begin its review. CEQA evidence includes biological and cultural resources surveys, studies, and results of records researches in the CHRIS and NAHC databases. <https://water.ca.gov/Work-With-Us/Real-Estate/Encroachment-Permits>

In accordance with Business and Professions Code Section 8771, DWR's Encroachment Permit Program requires the permittee to ensure there is a designated individual in responsible charge for the protection of survey control and monument preservation within the area in which construction will be conducted. The designated individual shall be a person legally authorized to practice Land Surveying in the State of California. Here is a link to the DWR monuments. <https://dwr.maps.arcgis.com/apps/webappviewer/index.html?id=d139ce32be9e43059b932c21521acfe1>

After reviewing the above, if there are any questions, please direct those questions to Delia Grijalva, Senior Right of Way Agent at Delia.Grijalva@water.ca.gov or (916) 621-8646.

Note: This proposed project will cross a DWR pipeline to the East of Hwy 101 which would require and Encroachment Permit. Also, as part of the EP process we will need to also review any impacts to drainage towards the DWR pipeline in the area as a result of the proposed project. It appears this project proposes to divert some flows to the East side of Hwy 101 to a creek that already experiences flooding in the area.

Thanks.

Daman Badyal, P.E.

Subject: [EXT]Public Comment Opposing the Dana Reserve Development Project

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Dear Jennifer Guetschow ,

I came to live in Nipomo from Tustin, CA and left the area because I had to watch the Irvine Company systematically destroy the beauty of Orange County with overdevelopment. They spared nothing! No tree, no plant, no animal. I watched as they mowed down mature avocado trees for homes. Avocado trees which could have been incorporated in the landscape. I moved to San Luis Obispo County because of the slow growth and the consideration for maintaining the integrity of the county. I am currently working in the Finance Department of the City of San Luis Obispo, and love our county. Our County has charm like no other in California. We think differently here. Everything has always been done with thoughtfulness and excellence.

As a resident of Nipomo for 15 years, I would like this opportunity to express my opposition to the Development of the Dana Reserve. "Up to 1289" residential units is TOO MANY for the 1/2 mile space. This large of development will overwhelm the resources available to Nipomo, and also destroy habitat to hundreds of animals which make Nipomo, Nipomo! Hundreds of beautiful oak trees being destroyed along with endangered plants and animals.

Since the Trilogy project went in, traffic on Teft is horrible. Nipomo residences want to keep Nipomo rural! Please take seriously the voices of the residences of Nipomo, and stop this project or at the very least reduce the number of units to be built on this space, and consider working into the plan the oak trees so the wildlife will not be displaced or destroyed.

There can be a solution which the developers and Nipomo residence can agree upon which will keep Nipomo's old town charm and respect the residence and all life in this area.

My hope for this San Luis County is integrity in all it's dealings, slow and smart growth which is considerate and represents our wonderful county well. Let us work together to keep this county beautiful in every way.

Thank you for your hard work.

DRAFT ENVIRONMENTAL IMPACT REPORT FOR DANA RESERVE SPECIFIC
PLAN – DATED JUNE 2022 (STATE CLEARINGHOUSE NUMBER: 2021060558)

Dear Ms. Guetschow:

The Department of Toxic Substances Control (DTSC) received a Draft Environmental Impact Report (EIR) for the Dana Reserve Specific Plan (Project). The Lead Agency is receiving this notice from DTSC because the Project includes one or more of the following: groundbreaking activities, work in close proximity to a roadway, work in close proximity to mining or suspected mining or former mining activities, presence of site buildings that may require demolition or modifications, importation of backfill soil, and/or work on or in close proximity to an agricultural or former agricultural site.

The EIR refers to the Hazardous Waste and Substances Sites List commonly known as the Cortese List. Not all sites impacted by hazardous waste or hazardous materials will be found on the Cortese List. DTSC recommends consulting with other agencies that may provide oversight to hazardous waste facilities and sites in order to determine a comprehensive listing of all sites impacted by hazardous waste or hazardous materials within the Project area. DTSC hazardous waste facilities and sites with known or suspected contamination issues can be found on DTSC's [EnviroStor](#) data management system. The [EnviroStor Map](#) feature can be used to locate hazardous waste facilities and sites for a county, city, or a specific address.

DTSC recommends that the following issues be evaluated in the Hazards and Hazardous Materials section of the EIR:

1. The EIR should acknowledge the potential for historic or future activities on or near the Project site to result in the release of hazardous wastes/substances on the Project site. In instances in which releases have occurred or may occur, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.
2. Refiners in the United States started adding lead compounds to gasoline in the 1920s in order to boost octane levels and improve engine performance. This practice did not officially end until 1992 when lead was banned as a fuel additive in California. Tailpipe emissions from automobiles using leaded gasoline contained lead and resulted in aerially deposited lead (ADL) being deposited in and along roadways throughout the state. ADL-contaminated soils still exist along roadsides and medians and can also be found underneath some existing road surfaces due to past construction activities. Due to the potential for ADL-contaminated soil, DTSC recommends collecting soil samples for lead analysis prior to performing any intrusive activities for the Project described in the EIR.
3. If any projects initiated as part of the proposed Project require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to [*DTSC's 2001 Information Advisory Clean Imported Fill Material*](#).
4. If any sites included as part of the proposed Project have been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 [*Interim Guidance for Sampling Agricultural Properties \(Third Revision\)*](#).

DTSC appreciates the opportunity to comment on the EIR. Should you need any assistance with an environmental investigation, please visit DTSC's [Site Mitigation and Restoration Program](#) page to apply for lead agency oversight. Additional information regarding voluntary agreements with DTSC can be found at [DTSC's Brownfield website](#).

Re: The Dana Reserve Project:

Dear Ms. Guetschow:

I am writing to express my concern regarding the Proposed Dana Reserve Project, a development proposal to include 288 acres in the Unincorporated Community of Nipomo. My family has lived in Nipomo for 22 years, and moved here because it was a green and rural community. We did not choose to live in a densely populated over-developed area in California, and do not want to live in one now.

After reading the Draft Environmental Impact Report (DEIR), the Unmitigatable Significant Class 1 issues which concern me most are:

- The densely packed housing plans (imbalanced housing vs job creation)
- Traffic, especially the impact on Willow Road (already a high-speed truck route) and Pomeroy Road
- Air quality and increased greenhouse gas emissions from an influx of thousands of new residents and cars
- Land planning distortions. Multiple elements of the project are out of alignment with the South County area plan, including how this land was intended to be developed vs the present project. The project contrasts dramatically with current residential homes, and telling residents with acreage to "get over it" as an official did at a recent discussion of the project reflects an unwarranted hostility to people who have been part of this community for years.
- Biological impacts - 3,948 mature, protected coast live oak trees to be removed, some of the last contiguous oak woodlands on the Nipomo Mesa, supposedly to be replaced by oak saplings not suitable for residential landscaping. For a detailed analysis of the environmental impacts of this proposed development, I expect you are familiar with the July 2021 letter from the California Native Plant Society sent to your office. Unfortunately none of their concerns appear to have been addressed to date.
- And most importantly for an arid region in the midst of extreme drought conditions - Water. It defies belief that this project was not immediately denied for that reason alone. There is not enough water for current residents and businesses in Nipomo, as we are reminded every month in our ever-increasing water bills. The theoretical possibility of purchasing and importing more water from Santa Maria seems an expensive and far-from-assured 'solution.'

The limited social and economic benefits of the Dana Reserve Project do not outweigh the many significant negative impacts of unchecked growth. As a citizen of Nipomo, I ask that this project be denied. Unless the world changes dramatically in the next few years there will never be enough water to support the largest proposed housing development in this area for 25 years. We owe it to Nipomo to preserve the quality of life for existing residents and retain the natural beauty of the land given to Captain Dana in 1837.

Sincerely yours,

Gail Roberts

[EXT]Dana Reserve Specific Plan - Draft EIR comments

Judd King <jkingsp@gmail.com>

Sun 7/10/2022 11:09 AM

To: Jennifer Guetschow <jGuetschow@co.slo.ca.us>

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Hello,

I am submitting the following comments regarding the Dana Reserve Specific Plan Draft EIR. Thank you for your consideration of these observations and questions.

Water

We are in a long term drought. Section 4.19.1 details an analysis of water demand projected out for the project vs availability from NCSD. This analysis assumes a consistent availability of water delivery from the City of Santa Maria through the supplemental NCSD water pipeline. The City of Santa Maria sells water they receive from the coastal branch of the State Water Project. Should there be further analysis performed to consider a reduction of available water from Santa Maria due to lack of State Water Project delivery? The State Water Project is often threatening no water delivery or only a few percentage points.

Wastewater

The project will increase water demand from the existing system. Should improvements to the WRF on Southland also consider some form of additional treatment system for indirect potable reuse or direct potable reuse? The percolation ponds at the plant largely replenish the area in the south of the community where there may not be any wells that are used for utility purposes.

Utilities

There will be needed upgrades at the existing Southland WRF and other water and wastewater infrastructure improvements. How will these be paid for? If this project impacts the NCSD system then why should other ratepayers be required to float the costs. Inflationary pressures will increase the cost of the proposed improvements. Have there been sufficient cost estimates to determine if developer fees and current rates will offset the future costs of these improvements?

Oak Mitigation and Habitat

This project has been compared to the Woodlands (Monarch Dunes) where thousands of eucalyptus trees were removed for that project. Eucalyptus trees do serve as habitat for various species, but they are not native. This project plans to remove a significant amount of oak trees and associated habitat. The layout of the villages does appear to try to preserve some of the closed oak woodland within the center of the parcel. However, the layout of the villages essentially clears entire areas of oak woodland and chaparral. The off-set mitigation parcel is located 2.1 miles east of the site. I know this area. I grew up just southeast of the parcel that will be used to "offset" the destruction of habitat. I am glad to see that the parcel used for offset will not be developed, but only a handful of people have ever seen or will ever see that parcel. It is steep, rough terrain. Isn't the purpose of conservation and off-set preservation to give people an opportunity to see the habitat? The layout of the project should be revised to further reduce impacts to oak woodlands and other habitat. Clear cutting of oak forests should be prevented. Goal BR-1 even identifies a lack of conservation and replacement of the 3,943 oaks that would be removed. The proposed conservation/off-set plan is insufficient and lacks the intent of true conservation and adherence to the county and CEQA regulations.

The project layout should be revised to reduce the oak habitat taken.

Transportation

Nipomo has become a true commuter community. The EIR even acknowledges the lack of commercial/jobs in the area? The project appears to continue the mindset of pushing workforce housing to areas that are unincorporated in SLO county. Planning and zoning in Nipomo has focused on concentrating commercial/retail to one area (Tefft Street between US 101 and Pomeroy) with this continuing on Frontage Road. If phasing of the project focuses on building residential housing before commercial/retail then traffic will likely increase and congestion worsen in the current Tefft Street corridor. Are traffic impact fees going to offset the amount of improvements that may be required to improve existing intersections. Traffic impact fees are collected from developers with the intent of implementing infrastructure improvements. San Luis Obispo County and the cities within the county have not enacted these improvements in a timely manner. There is often a several year lag between the houses and retail being constructed when local agencies design, bid and construct a project intended to address traffic impacts. Several examples include: Prado Road Interchange, Los Osos Valley Road Interchange, Brisco Road Interchange, Vineyard Drive Interchange and Tefft Street Interchange. Willow Road Interchange was significant to improving the traffic flow from developments off Willow Road and the Woodlands, but was constructed several years after those developments were started.

The developer should be required to implement infrastructure improvements that will immediately impact the traffic and transportation of the Nipomo Community. Traffic impact fees for long term improvements should also be collected.

Sincerely,
Judd King

To the SLO County Planning Commission
c/o Jennifer Guetschow; jguetschow@co.slo.ca.us

I am writing to express my concern regarding the Proposed Dana Reserve Project, a development project that will develop 288 acres in the Unincorporated County Community of Nipomo.

After reading the Draft Environmental Impact Report (DEIR), the Unmitigatable Significant Class 1 issues which concern me most are:

- Biological impacts: 3,948 oak trees to be removed, federally endangered species to be removed, special habitats to be removed. These impacts are not replaceable.
- Transportation -increased traffic, impacts on many roads throughout Nipomo that are not designed for this increased level of traffic
- Land Planning: multiple elements of the project are out of alignment with the south county area plan, including how this land was intended to be developed vs the present project.

Our small town relies on the County to do right by us. I can understand the desire for a development in Nipomo because there are housing needs and land is cheaper than in Arroyo Grande. There is plenty of treeless open land east of Highway 101 that wouldn't require the destruction of almost 4000 native oak trees. ,

As a Citizen of Nipomo I respectfully request that another location should be found or, if not, the number of homes needs to be significantly reduced. Please deny this project in its current form until the impacts of the development are greatly decreased.

We owe it to Nipomo to present a project that does not significantly decrease the quality of life for existing residents and retains the natural beauty of the land given to Captain Dana in 1837.

Thank you for your consideration.

Dated July 21, 2022 Signed: Elizabeth Scroggs

Attention: Trevor Keith, Director

Draft Environmental Impact Report (DEIR) for the Dana Reserve Specific Plan (PLN1118, SUB2020-00047, LRP2020-00007, ED21-094) Request for comment period to be extended.

Dear Mr. Keith,

On June 16, 2022 a Notice of Availability for the above referenced project was issued. On June 22nd, nearly a week after the published notice, Jeff Edwards and I attempted to access the county's web-link to the Dana Reserve Specific Plan DEIR and were unable to. Upon discovery of the web-link being inoperable, Mr. Edwards immediately notified, by email, Jennifer Guetschow, the planner on the project that he was having difficulty (email string attached). Later that day, during a Zoom meeting with Xzandrea Fowler and Schani Siong, Mr. Edwards also alerted them to the problem accessing the DEIR webpage.

Both Ms. Fowler and Ms. Guetschow were responsive. Ms. Fowler responded later June 22nd with a link that was not operable and the next day Ms. Guetschow responded with a link that takes one to ca.gov (the home page of California state website).

It is unclear how long the DEIR website was unavailable to the public. Out of the abundance of caution, I ask that the comment period remain open at least another week, due to the possibility that the web-link was unavailable from the noticing date of June 16th to June 23rd, the day after Mr. Edwards notified members of your the staff.

Beyond the question of DEIR availability there are several other reasons to consider extending the comment period. One, this is a large project; it is complicated and will have potential long-lasting impacts. Secondly, the comment period occurs during the height of summer, when people are on vacation and/or distracted with travel and visitors. It would be best to extend this important project's DEIR comment period to ensure the procedural aspects of the projects consideration are defensible when final decisions are made.

All things considered, I request, as lead agency the County of San Luis Obispo, extend the comment period for the DEIR to August 31st.

From the Desk of Julie Tacker

Sincerely,

RE: Concerns for development in Nipomo off Willow Rd and DEIR

July 20, 2022

Let me start with the traffic studies that have been conducted on Ten Oaks. Even though they show excessive traffic on Ten Oaks, they are not even close to accurate on the actual traffic. The study was in July and the second week of December/first two weeks of January. This is the time when the high school is out of session. Traffic on our street is triple what has been recorded when the high school is in session. I have a camera that records our traffic daily...you are welcome to review it any time.

Ten Oaks is used as a cut-through for ALL people avoiding Tefft Street in the morning and afternoon. The addition of a traffic signal on the intersection of Willow and Pomeroy was supposed to alleviate traffic on our street. It has increased traffic...I guess folks do not want to wait at the light or travel the extra mile.

Everyone who lives in Nipomo knows to avoid Tefft Street at high traffic times (morning, late afternoon, weekends). This new development will bring an additional 3,000 cars to a 1-mile square radius...with two exits onto Willow. Cars leaving this development will all use the north exits on to Willow ...even if destination is south. This will create the same problems we now have on Tefft. Is the plan to add additional traffic lights on Willow at the egress? How will you mitigate the traffic back-up to enter/exit the freeway at Willow? With all these additional vehicles attempting to exit/enter this development during high traffic times, it will also increase the traffic on surrounding streets...adding to existing traffic through our neighborhood from all avoiding Tefft Street.

The county's original plan was to extend Hetrick from Pomeroy to Willow. In doing so, they made the entrance from Willow to Hetrick look like a major intersection...inviting all to drive through our neighborhood. We have eighteen wheelers, school buses, tractors, and dump trucks traveling daily through our streets that were not designed for this traffic.

Major street improvements must be completed PRIOR to the start of this development. The proposed two cut-throughs for this development ARE NOT improvements and will not stop cut-throughs to existing neighborhoods. They will turn Willow into the same problems we have on TEFT and ADD additional traffic through our neighborhood. Hetrick needs to be a straight shot from Pomeroy to Willow. Willow will need to be four lanes from Pomeroy to east of the highway 101...and the freeway off-ramps will need work as well. What is the plan to mitigate an additional 3,000 cars moving during high traffic hours in a ¼ mile stretch?

I disagree with this development. Too many homes consolidated on small lots will create traffic that cannot be mitigated. The current home make-up for this area is homes on 1+ acre. Let us keep it this way.

Matt Kobliska
855 Ten Oaks Way
Nipomo, Ca 93444

Subject: [EXT]Dana Reserve - We Oppose

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Dear Ms. Guetschow,

We oppose the Dana Reserve Development Plan and wish to have our concern and opposition recognized. Our basic concerns include the following:

Traffic - ~4800 new residents in such a small space is going to create havoc on local traffic, particularly during commute times and school start/stop times. Ten Oaks, despite what local politicians claim, already has an excessive amount of traffic during those times...please note the traffic survey the county conducted on Ten Oaks was during Covid in July of 2020 so it does not reflect our "normal" traffic load. Additionally, the corner of Glenhaven and Hetrick is a hairpin turn, and very dangerous. Additional traffic is only going to make that turn even more treacherous. Please consider closing Hetrick/Glenhaven at the hairpin turn and opening Hetrick all the way through to Pomeroy so that the Pomeroy to Willow shortcut via Ten Oaks is no longer necessary. Opening Hetrick and closing Glenhaven eliminates the need to come to Ten Oaks.

Additionally, these homes are being proposed/ marketed as being beneficial to workers and that residents would not need to contribute to traffic...that they can guarantee they would reduce vehicular trips. This is preposterous. The ratio of jobs per capita in Nipomo is lower than any other town in the county, and we are on the border of Santa Barbara county. If you build homes for workers here, they will have to commute. And they will be closer to jobs in Santa Maria than in our own county. If these homes are truly for the "working class", then they should be built where the jobs are...further north, in the middle of the county! Otherwise, you're just housing Santa Maria's work force. It makes no sense, and it will definitely create more traffic on both the city streets and the highway.

Light, Noise and Air Pollution - the development plan is too dense, and will illuminate our night sky, and bring added noise and air pollution. Please require a large setback and extra tall natural screen along the western boundary against Hetrick and reduce the number of homes.

Devaluation of real estate in adjacent neighborhood - our homes on Ten Oaks are worth \$1M+ and all sit on approximately one acre or more. The new residences are dense housing, even the "larger" homes, and are not of like kind to the adjacent neighborhood. This will devalue our homes. While I understand this is a "not in my backyard" argument, the devaluation of our neighborhood will impact Nipomo as a whole. Please significantly reduce the number of homes and require larger lots so that they are of like kind to the surrounding established neighborhoods.

Water requirements in severe drought - given the current state of our State with regard to water use and mandates due to drought, we do not trust the agreement with Santa Maria to be enough of a guarantee that we will not be in a shortage when these new homes are added. Contracts are broken all the time and the water supply this project is relying upon does not even come from the same county. Santa Barbara county has no strong reason to support the water demands when severe shortages become an issue. They will break the contract and supply Santa Barbara county residents first.

Electrical grid stress - the addition of 1,289 all electric homes will bring more brown outs to our area. We all know PG&E has severe issues already. Please reduce the amount of homes to reduce the strain on our electrical grid and keep us all powered up.

Stress on emergency services and infrastructure - More people to service means we need more Sheriff, Fire, Paramedics, etc. They are already stretched very thin. Please reduce the number of new residences. With a 25% increase to our population with only one development, the town is not ready to support the residents. We currently only have one grocery store, and it is already overtaxed and understocked...try stopping by for milk on a Sunday afternoon. We are already underserved, please don't make it worse! And PLEASE do not put a fire or police station in the development!

Devastation to Flora and Fauna - we are not botanists or arborists, but we do love our oaks and native plant life. We believe the DEIR is filled with half truths and glossing over the real devastation that will happen to the Dana Reserve and how it will impact our wildlife and Nipomo as a whole. The plan, as it currently stands, will exterminate federally protected native plants that cannot be replaced and KILL approximately 4,000 "protected" oaks without proper mediation. The mediation plan bases the "preservation" off of 197 oaks, not 4,000, and it will be in another location across the freeway...none of this makes sense. For those of us that also own many of these large OLD oak trees (ours are estimated to be about 300 years old!) and do everything in our power to make sure they continue to live long healthy lives, it makes no sense that the developer is allowed to destroy SO many! We cannot even begin to fathom what level of destruction of local wildlife habitat and the wildlife itself this will bring. It is heart wrenching. Please do not devastate the landscape so drastically. Please reduce the development.

It seems that this project is a pipe dream filled with all sorts of hollow promises and glosses over the real damage that will be done. How does it make any sense at all to increase the population of Nipomo by 25% in ONE project that is on only 288 acres. Who would ever think that is a good idea? This project is much too large for the space, does not fit the community character or needs, and brings multiple types of devastation to our community. We implore you to please take these things into serious consideration and require the developer to make some drastic changes to the existing plan.

Thank you for your consideration,

Dave and Sandy Christiansen

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

It's depressing to even read about this project.

I currently live in San Luis Obispo. It took 20 years to get here. Saving money and working hard. Now that I've moved to this county, I'm worried about the growth.

Please don't change the landscape all over this county.

Please don't allow them to cut down all those trees.

Please don't allow this area to keep building like this.

I firmly oppose.

Dear Jennifer Guetschow,

I am voicing my opposition to this project as there are too many issues that cannot be satisfactorily mitigated. These issues include (1) the extreme size of the project, (2) the removal of almost 4,000 oak trees which are irreplaceable, (3) over-density of the project resulting in damage to the environment, increased traffic, increased water usage in a drought, and (4) insufficient public services to handle the increase in population, such as law enforcement (already too few sheriffs), fire department, and medical providers and services. The Draft Environmental Impact Report (DEIR), fails to properly address these issues.

Due to these, and other, significant impacts of the project, I request that this project be denied. If it is to be considered further, it should be considered sometime down the road when the drought has eased and a more reasonable plan may be proposed.

Thank you for your consideration.

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

I do LOVE the way the area is currently undeveloped. I love driving by on the freeway and see the cattle roaming and the beautiful oak trees. I do hope our city does not turn out to be like a lot of the beach cities in southern California. These are a few concerns I have about the project, seeing I am a resident in Nipomo:

How will this impact our schools?

How will it impact our water storage?

Can our sewer plant handle this large quantity of waste?

How will our streets and intersections handle the large amount of traffic?

I understand they will remove the old oak trees with smaller trees, how will this look?

How can our sheriff's handle the increase of population as they can not handle what they have now?

The post office can not handle what we have now and the parking lot is a disaster, what will happen with more people?

Nipomo is currently unincorporated, with this much population would the city now need to incorporate?

Will the design of the project be better than what is currently done on Tefft street, putting in center dividers with weeds?

The other side of the freeway does not have the beautiful oak trees, why not build there?

When our family comes to visit from the beach area in southern California, they always comment on the open land and how refreshing it is. I know progress has to take place but I think in this instance not all the research has been done on how that particular area will impact our little city, which is a jewel. Also with natural resources being strained, is this the right time for this project? PLEASE take a moment and reconsider this project.

Pam Howard

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Hello my name is Susan SHALEEN I live at Glenhaven Pl, Nipomo. I'm writing you in regards to the development being proposed on 288 acre in Nipomo.

This is close to our house and the impact will be great. With the development of Monarch Dunes homes we have seen a crushing impact. We have ONE grocery store, ONE major pharmacy. We have seen the store shelves run out of products and the wait at our pharmacy has become very long. The impact it will have on our town is unacceptable.

The county will not close the Glenhaven/ Hetrick tight corner BUT will Allow the undeveloped part of Hetrick Rd. To be given to the developers to add to the lots along that side. WE paid taxes on this for over 45 years, many use it as a walking trail for humans, dogs, and horses. Unacceptable!

The safety issue of the corner of Glenhaven and Ten Oaks is very dangerous, as well as increased traffic, used as a short cut to Willow Road. Does the county want to align with developers or care for the taxpayers of Nipomo?

The loss of trees is a heartfelt issue. I understand there will be a replanting across Hwy. 101. The trees to be removed are older, the new ones cannot replace the age of these. There will not be mature green scape in this development, only excessive density housing.

Nipomo has carried the brunt of the county and states desire to have more housing, San Luis Obispo is a large county let them look elsewhere. I strongly oppose this project and ask the county yo reconsider moving forward.

Thank you

Susan SHALEEN

RE: County of San Luis Obispo's Dana Reserve Project (Agenda No. 8)

Dear Jennifer Guetschow,

On behalf of the Southwest Regional Council of Carpenters (“**Southwest Carpenters**” or “**SWRCC**”), my Office is submitting these comments for the County of San Luis Obispo’s (“**County**”) July 14, 2022, Planning Commission Scoping Meeting for the Dana Reserve Project (“**Project**”).

The Southwest Carpenters is a labor union representing 57,000 union carpenters in six states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work, and recreate in San Bernardino and surrounding communities and would be directly affected by the Project’s environmental impacts.

The Southwest Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Cal. Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225

Cal.App.4th 173, 191 (finding that any party who has objected to the project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Carpenters requests that the County provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”) (Cal. Public Resources Code, § 21000 *et seq.*) (“**PRC**”), and the California Planning and Zoning Law (Gov. Code, §§ 65000–65010) (“**Planning and Zoning Law**”). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

The County should require the use of a local skilled and trained workforce to benefit the community’s economic development and environment. The County should require the use of workers who have graduated from a Joint Labor/Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce

Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, local skilled and trained workforce requirements and policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component” can result in air pollutant reductions.²

Cities are increasingly incorporating local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward’s 2040 General Plan requires the city to “promote local hiring . . . to help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions.”³

The City of Hayward has even gone as far as incorporating a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its downtown area to require that the City “[c]ontribute to the stabilization of regional construction markets by spurring applicants of housing and nonresidential developments to require contractors to utilize apprentices from state-approved, joint

labor-management training programs[.]”⁴ Additionally, the City of Hayward mandates the same measure on all projects that are 30,000 square feet or larger.⁵

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.⁶

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁷ Some municipalities have even tied local hire and skilled and trained workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

⁴ City of Hayward (2019) Hayward Downtown Specific Plan at p. 5-24, available at <https://www.hayward-ca.gov/sites/default/files/Hayward%20Downtown%20Specific%20Plan.pdf>.

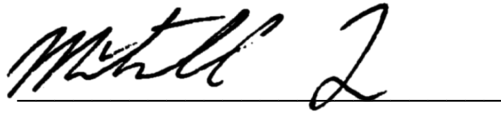

⁵ City of Hayward Municipal Code, Chapter 10, § 28.5.3.020(C).

⁶ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, available at <https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁷ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, available at <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

Therefore, the County should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas emissions, improve air quality, and reduce transportation impacts.

Sincerely,

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁴ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14-15.

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

⁹ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Annual

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

<i>% Decrease in Construction-related GHG Emissions</i>	17%

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society*. Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States” Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P.** (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florida, Alabama. *The AEHS Annual Meeting*. Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition*. Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference*. Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference*. Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants..* Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conference*. Lecture conducted from Indianapolis, Maryland.

Rosenfeld, P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation*. Lecture conducted from Anaheim California.

Rosenfeld, P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest*. Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell*. Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest*. Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Subject: [EXT]Dana Reserve Plan

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

To County of San Luis Obispo,

I am writing this letter because I am against this plan (Dana Reserve). I, as a tax payer and property owner for the last 42 years here in Nipomo, feel that this is not a good plan. There is definitely not enough water to be building this many homes. We have had to cut back to watering only 2 days a week on our property and they have invoked surcharges if we go over a very small amount. We have no grass on one and a half acres and we still had a surcharge this month. If you read the news you would be aware that the whole west is in a drought. Look at Lake Mead, Lake Powell, Shasta Lake, Trinity Lake, Lake Orville, and even the Great Salt Lake in Utah. Open your eyes. No large building plans should be allowed at this time.

The area they want to put small lots on if allowed should only be 1 acre home sites or 5 acre home sites.

This plan will have a negative impact on our schools, our grade schools and High school are at capacity. It will also cause more traffic problems.

Environmentally, it's horrible that they would allowed to take out over 3,000 trees. Most of these trees are over 100 yrs old. There is no replacing oaks this old. That was proven on the 100 acre property across from the Dana Adobe. As a Dana docent in the past I have watched the replanting of seedling oaks that have failed in the last 20 years. They have replanted these tree and watered and protected these tree and they are failing again. The trees on the Dana Reserve are enjoyed every day by thousands of commuters on Hwy 101. If they think the trees on the other side of the Temetate Ridge will be enjoyed by the public that is false.

We don't have the infrastructure or the services to provide for these homes and over 4,000 new residents here in Nipomo.

Please vote No on allowing this Plan.

Thank you,
Susan Duran

Dana Reserve Draft Environmental Impact Report

Section 4-17, Transportation

Regarding TR/mm-3.1:

Even though I chair the Nipomo Traffic and Circulation Committee I am not sending this as a Nipomo T&CC member

EIR Statement

TR Impact 3 (Class I) Buildout of the Specific Plan Area would exceed the County VMT thresholds and therefore would not be consistent with State CEQA Guidelines Section 15064.3(b). VMT per employee would be incrementally reduced compared to existing conditions; however, the project-related increase in residential VMT per capita and overall VMT would exceed the County VMT thresholds. Mitigation Measures TR/mm-3.1 A transportation demand management program or identification of transportation demand management strategies to implement would be required of each applicant. The residential, commercial, education, and/or hotel development applicant in consultation with the County of San Luis Obispo will choose feasible transportation demand management strategies and tailor to the development proposal. Potential measures to reduce vehicle miles traveled include, but are not limited to:

My Response to mitigating proposals

1. Improve or increase access to transit - Not possible

RTA has admitted an unwillingness to add more transit stops in Nipomo as there is insufficient population density to warrant more stops. I have applied several times through the Unmet Needs Program always receiving a denial response . Developer plans on providing transit stops in the project and a Park-and-Ride. These will be to no avail and does not mitigate the VMT

2. Increase access to common goods and services – Does not appear to be feasible

Common goods and services consist of numerous and various retail establishments, professional services, schools and including various medical specialties, vehicle service facilities, post offices and many other services. The developer's proposed commercial area appears to be rather limited. Will the developer be required to provide all of the common goods and services? Where will they be sited?

3. Incorporate affordable housing into the project – This does not mitigate VMT it increases it

This implies smaller lot sizes hence, more houses per acre resulting in more vehicles adding to the VMT

4. Orient the project towards transit, bicycle, and pedestrian facilities – Repetitive

Impossibility of transit already mentioned in 1. Pedestrian facilities implies easy access to good and services which probably not available per 2.

5. Improve bicycle and/or pedestrian facilities and/or transit services – **Repetitive**

This is already addressed in 4.

6. Limit or eliminate parking supply – **This does not mitigate VMT it increases it**

A two or three car family will remain a two or three car family regardless of parking availability. They will simply drive farther to park thus increasing VMT. In many cases rental units are shared by more than one family (as are some single family units) This may result more than two or three cars per unit.

7. Implement or provide access to commute reduction programs- **How can this be done**

Will the developer fund car-, bike-, and ride-sharing programs for the design life of the project.

8. Provide car-, bike-, and ride-sharing programs – **Repetitive**

Same as 7.

9. Provide transit passes – **What transit?**

As per 1 and will the developer continue to provide passes for the design life of the project.

10. Provide on-site amenities at places of work. **How?**

Developer has no control over places of work. Will he be funding the amenities? if the workplace is required to provide these amenities then this is not a project provided mitigation.
