GENERAL NOTES

DESIGN NOTES

SPECIFICATIONS: A.A.S.H.O. dated 1953 with subsequent modifications and Bridge Department Supplement dated 1953.

LOADS: Live Load = one H20-S16-44 truck with 30% impact for all cover depths. Neglect live load when on single spans cover is more than 8' and exceeds span or on multiple spans cover exceeds distance between faces of exterior walls. Culverts at grade treated as bridge, with wheel load on invert slab distributed over 7.0' transversely and breadth of culvert longitudinally. Live load distributed thru fill as follows:- Transverse spread = 1.2 + 1.6F; longitudinal spread = 1.5 + 1.5F. Earth load of 120 lbs. per cu. ft. and an equivalent fluid pressure of 36 lbs. per cu. ft. (both reduced 30% for balanced design) and modified for bedding and backfill conditions.

UNIT STRESSES: f_s = 20,000 psi; f_c = 1,000 psi; n = 10; u = 300 psi; v = 90 psi. Reinforcement to be round deformed bars. Embedment is 1½ Dia. clear, min 1", except as noted. Hooks shall conform to Manual of Standard Practice, A.C.I. Backing for hooks is 4 diameters. Bar splices to be 20 diameters, unless noted. Deformations shall conform to A.S.T.M. A-305-49. Distribution "d" bars; Cover "0" to span length, top slab = $\frac{100}{\sqrt{S}}$, max. 50%. Cover "0" to span length, bottom slab = $\frac{50}{\sqrt{S}}$, min. 25%. Cover exceeding span length, top and bottom slabs = 25%.

CONSTRUCTION NOTES

SPECIFICATIONS: Standard Specifications, Division of Highways, and Special Provisions accompanying plans.

MAXIMUM COVER: Strength Classification should be reviewed in the field after foundation is exposed. If excavation discloses foundation materials different than presumed for design, the design should be reviewed to determine the necessity of ①—Stronger culvert section; ②—Improvement of bedding and/or ③—Method "B" backfill, (see Standard Specifications), except vertical faces of trench shall not be more than 1' outside dimensions of the structure.)

EXPANSION JOINTS: None in invert slab. Under cover less than span length, place ½" exp. jt. material in top slab and side walls in dividing strip or outside shoulder. Under cover more than span length, place expansion joints in top slab and side-walls only at 30'± ctrs., and additional joints, as directed by the Engineer, at locations of change of foundation material.

CONSTRUCTION LOADS: Construction loads heavier than legal loads not permited until concrete has reached a strength of 3000 psi and structure strutted and cushioned as directed by Engineer.

LOCATION NOTES

HYDRAULICS: If slope of natural channel exceeds "neutral slope" of culvert entrance capacity for 10-yr. flood (Q_{10}) will usually determine size. Otherwise compute total head = $(\frac{Q_{100}}{8A})^2(1.05 + \frac{kL}{100})$, where "k" is head factor, "L" is length of culvert and Q_{100} the 100-yr. flood, and compare with allowable head. Tabulated elements are for full nominal section.

MAXIMUM COVER: Allowable depends on bedding and backfill. Use:
CASE II-For construction in trench on hard foundation.
CASE IV-For construction in trench on yielding foundation; also if Method "B" backfill is used.
CASE VI-For construction on hard foundation.
CASE VIII- For construction on yielding foundation also on hard foundation if Method "B" backfill is used.
For further information on Cases see "California Culvert Practice"

LOCATION NOTES CONT'D

DESIGNATION: Show on plans as Span x Height-Strength Classification-Case x Length: thus 4x4-A-VIII x 60, followed by alternatives.

ALTERNATIVES: Invert will be sloped unless "Trapezoidal Invert", "Flat Invert" or "V-Invert" is included in designation. Ends of culvert will be rounded unless "Square Ends" are designated. Parapet on culverts with over 2' cover will be 1'-0" unless "___ft. parapet" is designated. Such designations may be different for inlet and outlet ends.

QUANTITIES: Quantities are for estimating only. They are for the alternate flat invert slab and do not include splices in longitudinal bars nor concrete and reinforcing for special coverage. Lengths of "b" and "b₁" bars are same. Vary bending of "b₁" bars to suit bottom slab.

SPECIAL COVERAGE: Where culverts are constructed adjacent to salt water, thickness of concrete shall be increased to provide 2" coverage between steel and exposed surfaces. Where scour is anticipated, thickness of bottom slab shall be increased to provide 2" minimum coverage between steel and exposed surface.

USE OF STANDARD PLAN

"STRENGTH CLASSIFICATION", symbolized by the letters "A, B, C," etc., at the top of the data table is merely a convenient designation for a particular structural section for a culvert of any given opening. It is dictated by two factors, (1) the method of bedding and backfill, and, (2) the cover or depth of fill over the top slab. For convenience, bedding and backfill conditions are grouped into "Cases" II, IV, VI, VIII, which are illustrated by sketches and described in the "Location Notes." With little or no information on soil conditions, assume Case II or VIII.

EXAMPLES

AS DESIGNER: It has been determined by hydraulic study, or other reasons, a std. 10'x 8' culvert 60' long is required, to be constructed in the open (no trench) on a yielding foundation and under 13' cover.

Procedure:-From the sketches of Cases and Location Notes it is found bedding and backfill conditions conform to Case VIII. Enter the table at the 3rd line from the bottom (Case II or VIII) and select the 2nd column under the 8' row where cover depths to 14' are allowed. Move to the top of this column, where the required "Strength Classification" indicated by the letter "B" will be found. Final designation: Std. 10'x 8'-B-VIII x 60'.

AS RESIDENT ENGINEER: It is discovered in making the excavation for the above culvert, that the foundation is hard, instead of yielding as expected, and that compacted backfill will be used. From information on the standard plans it is ascertained this situation to be Case VI, which for a 13' cover requires Strength Classification "C". Accordingly, Change Order should be initiated calling for a Std. 10'x8'-C-VI x60'.

TYPE "A" TYPE "B"
(FLARED OR STRAIGHT WING HEADWALLS & ENDWALLS)

NOTES

DESIGN NOTES:

Earth load of 100#/cu.ft. and an equivalent fluid pressure of 30#/cu.ft.
Wingwalls designed for 2' surcharge.
Unit stresses: f_s=20,000 #/□"; f_c=1000 #/□"; n=10.
Maximum soil pressure = 1 1/2 tons per sq.ft.
All reinforcing steel round deformed bars, conforming to A-305-49.
Hooks shall conform to Manual of Std. Practice, A.C.I. Backing for hooked bars 4 diameters. Embedment is 1 1/2 dia. clear, min. 1", unless noted.

CONSTRUCTION NOTES:

Standard Specifications and the Special Provisions accompanying plans.
Elevations, length, and angle of flare of walls may be varied by the Engineer to suit conditions encountered in the field.

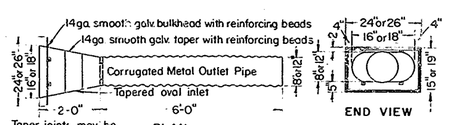
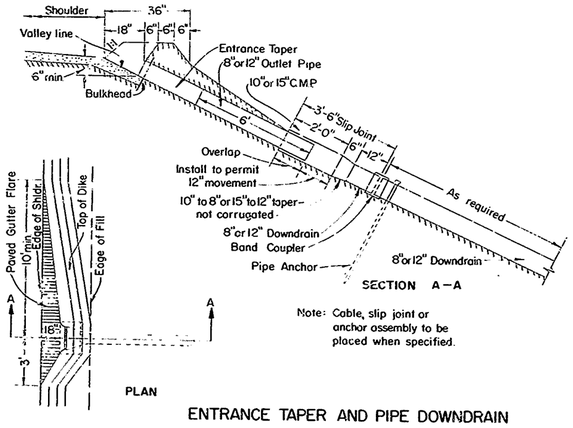
ENTRANCE TAPER

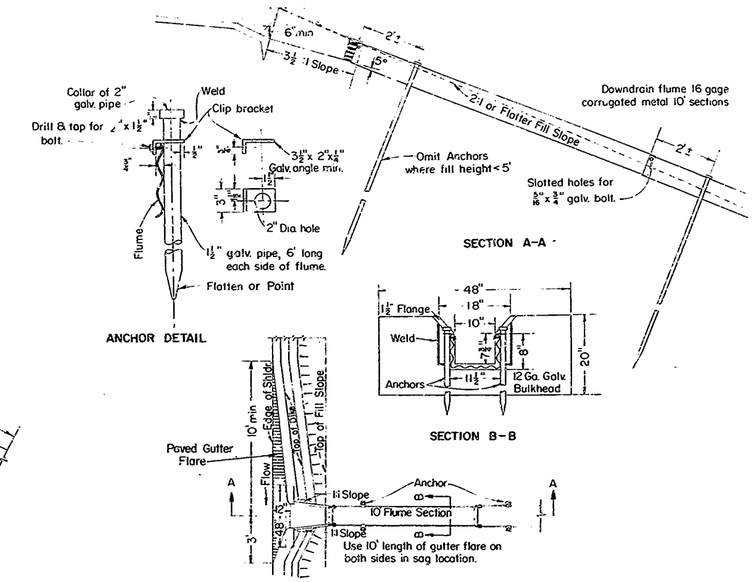




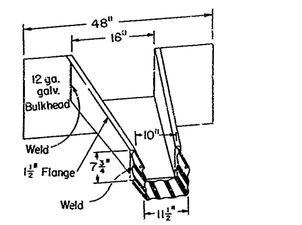
Note: Cable, slip joint or anchor assembly to be placed when specified.

ENTRANCE TAPER AND PIPE DOWNDRAIN

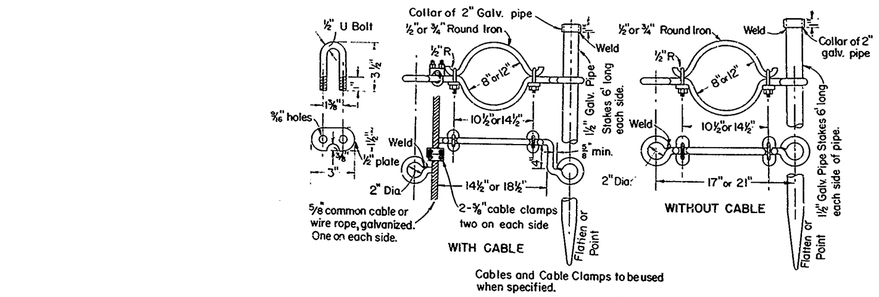
Use 10' length of gutter flare on both sides in sag location.



TAPERED INLET AND FLUME DOWNDRAIN

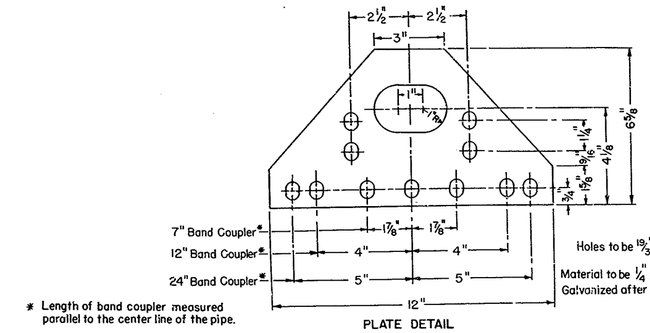


TAPERED INLET



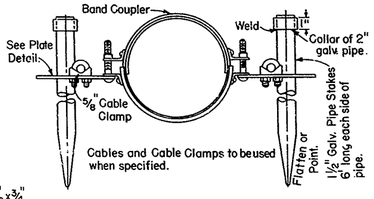
Cables and Cable Clamps to be used when specified.

ANCHOR ASSEMBLY ALTERNATIVE A



Holes to be 19/32"x¾".

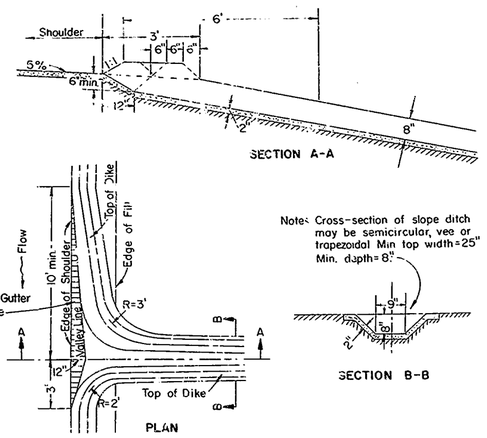
Material to be ¼" plate Galvanized after fabrication.



Cables and Cable Clamps to be used when specified.

ANCHOR ASSEMBLY ALTERNATIVE B

For payment purposes; an Anchor Assembly shall include two Pipe Stakes. All Pipe Stakes to be galvanized after fabrication.



ASPHALT CONCRETE SPILLWAY

to be used on fill slopes flatter than 2:1 Use 10' length of gutter on both sides in a sag location.

SECTIONS

NOTES:

1. - Case 1 normally applies
2. - Use Case 2 when ramp slopes would exceed 10% in Case 1.
3. - Use Case 3 when sidewalk slope would exceed 6% in Case 2. Longitudinal slope of warped area adjacent to driveway shall not vary more than 6% from the longitudinal grade line of the sidewalk.
4. - X=3'-0" except for curb heights over 10" where 4:1 slopes shall be used on curb slope.
5. - Sidewalk and ramp thickness "t" at driveway shall be 4" for residential and 6" for commercial.
6. - Difference in slope of the driveway ramp and the slope of a line between the gutter and a point on the roadway 5 feet from the gutter line shall not exceed 15%. Reduce driveway ramp slope, not gutter slope, where required.

INSTALLATION NOTES

CONDUIT

1. Unless otherwise indicated, service and detector runs and conduit into sign structure foundations shal' ~ 1 inch and all other conduit shall be 1½ inch.
2. Conduit shall b[illegible] [illegible]led 18" minimun below curb grade in sidewalk areas and 36" mini[illegible] [illegible]w grade or finished surface in all other areas, except that conduit [illegible] [illegible]ed within curbed dividing strips constructed on existing pavement may be laid on and secured to the pavement.
3. Conduit runs parallel to curbs shall be placed adjacent to back of curb, except where in conflict with existing facilities.
4. Existing underground conduit to be incorporated into new systems shall be cleaned with a mandrel and blown out with compressed air.
5. Conduit terminating in standards and pedestals shall extend 2" max. above finished top of foundation and shall slope toward the handhole.
6. Conduit entering controller cabinets shall be sealed with paraffin or other approved sealing compound.
7. Service risers shall be terminated with a service head or shall be sealed to prevent the entrance of water, as approved by the serving utility.

PULL BOXES

1. Pull boxes shall be No.5 except as indicated.
2. Pull boxes shown in the vicinity of curbs shall be placed adjacent to back of curb, except when in conflict with existing facilities.
3. Top of pull boxes shall be level with curb or sidewalk grade or 1" above surrounding ground when no finished grade is established.
4. Pull boxes shown adjacent to standards shall be installed against but not on roadway side of foundation.

CONDUCTORS AND WIRING

1. Signal neutral shall be a separate #10 AWG conductor.
2. Conductors between ballasts or transformers and luminaires shall be #10AWG, 600volt
3. Conductors between series-to-multiple transformers and sign fixture ballasts shall be #10AWG, 600 volt.
4. Number of conductors indicated in signal system conduit includes three #14 AWG spares.
5. Conductors shall be identified with bands.
6. Underground conductors to signals shall be run without splice, except that where existing signals are being modified, signal conductors may be spliced where indicated.
7. Neutral conductors may be spliced in pull boxes.
8. Two feet of slack shall be provided in each conductor in each pull box.
9. A separate conductor, other than neutral, shall be run from each detector to controller cabinet.
10. Connection to each terminal of a pedestrian push button shall be by a single conductor. Splices shall be made in nearest pull box.
11. Color coding for wiring to pedestrian signals shall be as specified for corresponding vehicular green and red indications.
12. One side of secondary circuit of series-to-multiple transformers shall be grounded. On structures the grounding electrode shall be the conduit system. Off structures, it shall be a 1/2" X 8' ground rod installed through bottom of pull box.

SIGNAL EQUIPMENT

1. Pressure detectors shall be 6 feet long, non-directional, unless otherwise indicated.
2. Detector position dimensions refer to contact unit.
3. Top of detector foundation shall be level with pavement surface.
4. Detector contact unit surface shall be level with rim of frame or no more than 1/8 inch higher. If low, unit shall be raised using one-piece, galvanized, sheet metal shims with dimensions the same as the bottom surface of the contact unit.
5. Vehicular and pedestrian signal mountings shall be oriented so as to provide maximum horizontal clearance to adjacent roadway.

ELECTROLIERS

1. A Mercury-vapor lamp ballast shall be installed in a pull box adjacent to each electrolier, except as indicated.

FOUNDATIONS

1. Top of foundations for standards (before grouting) shall be level with top of curb in curbed areas or 6 inches above surrounding grade in other areas.
2. Except as indicated, standards shall be installed with 2 foot clearance to face of curb, edge of shoulder, back of dikes, and back of ditches.

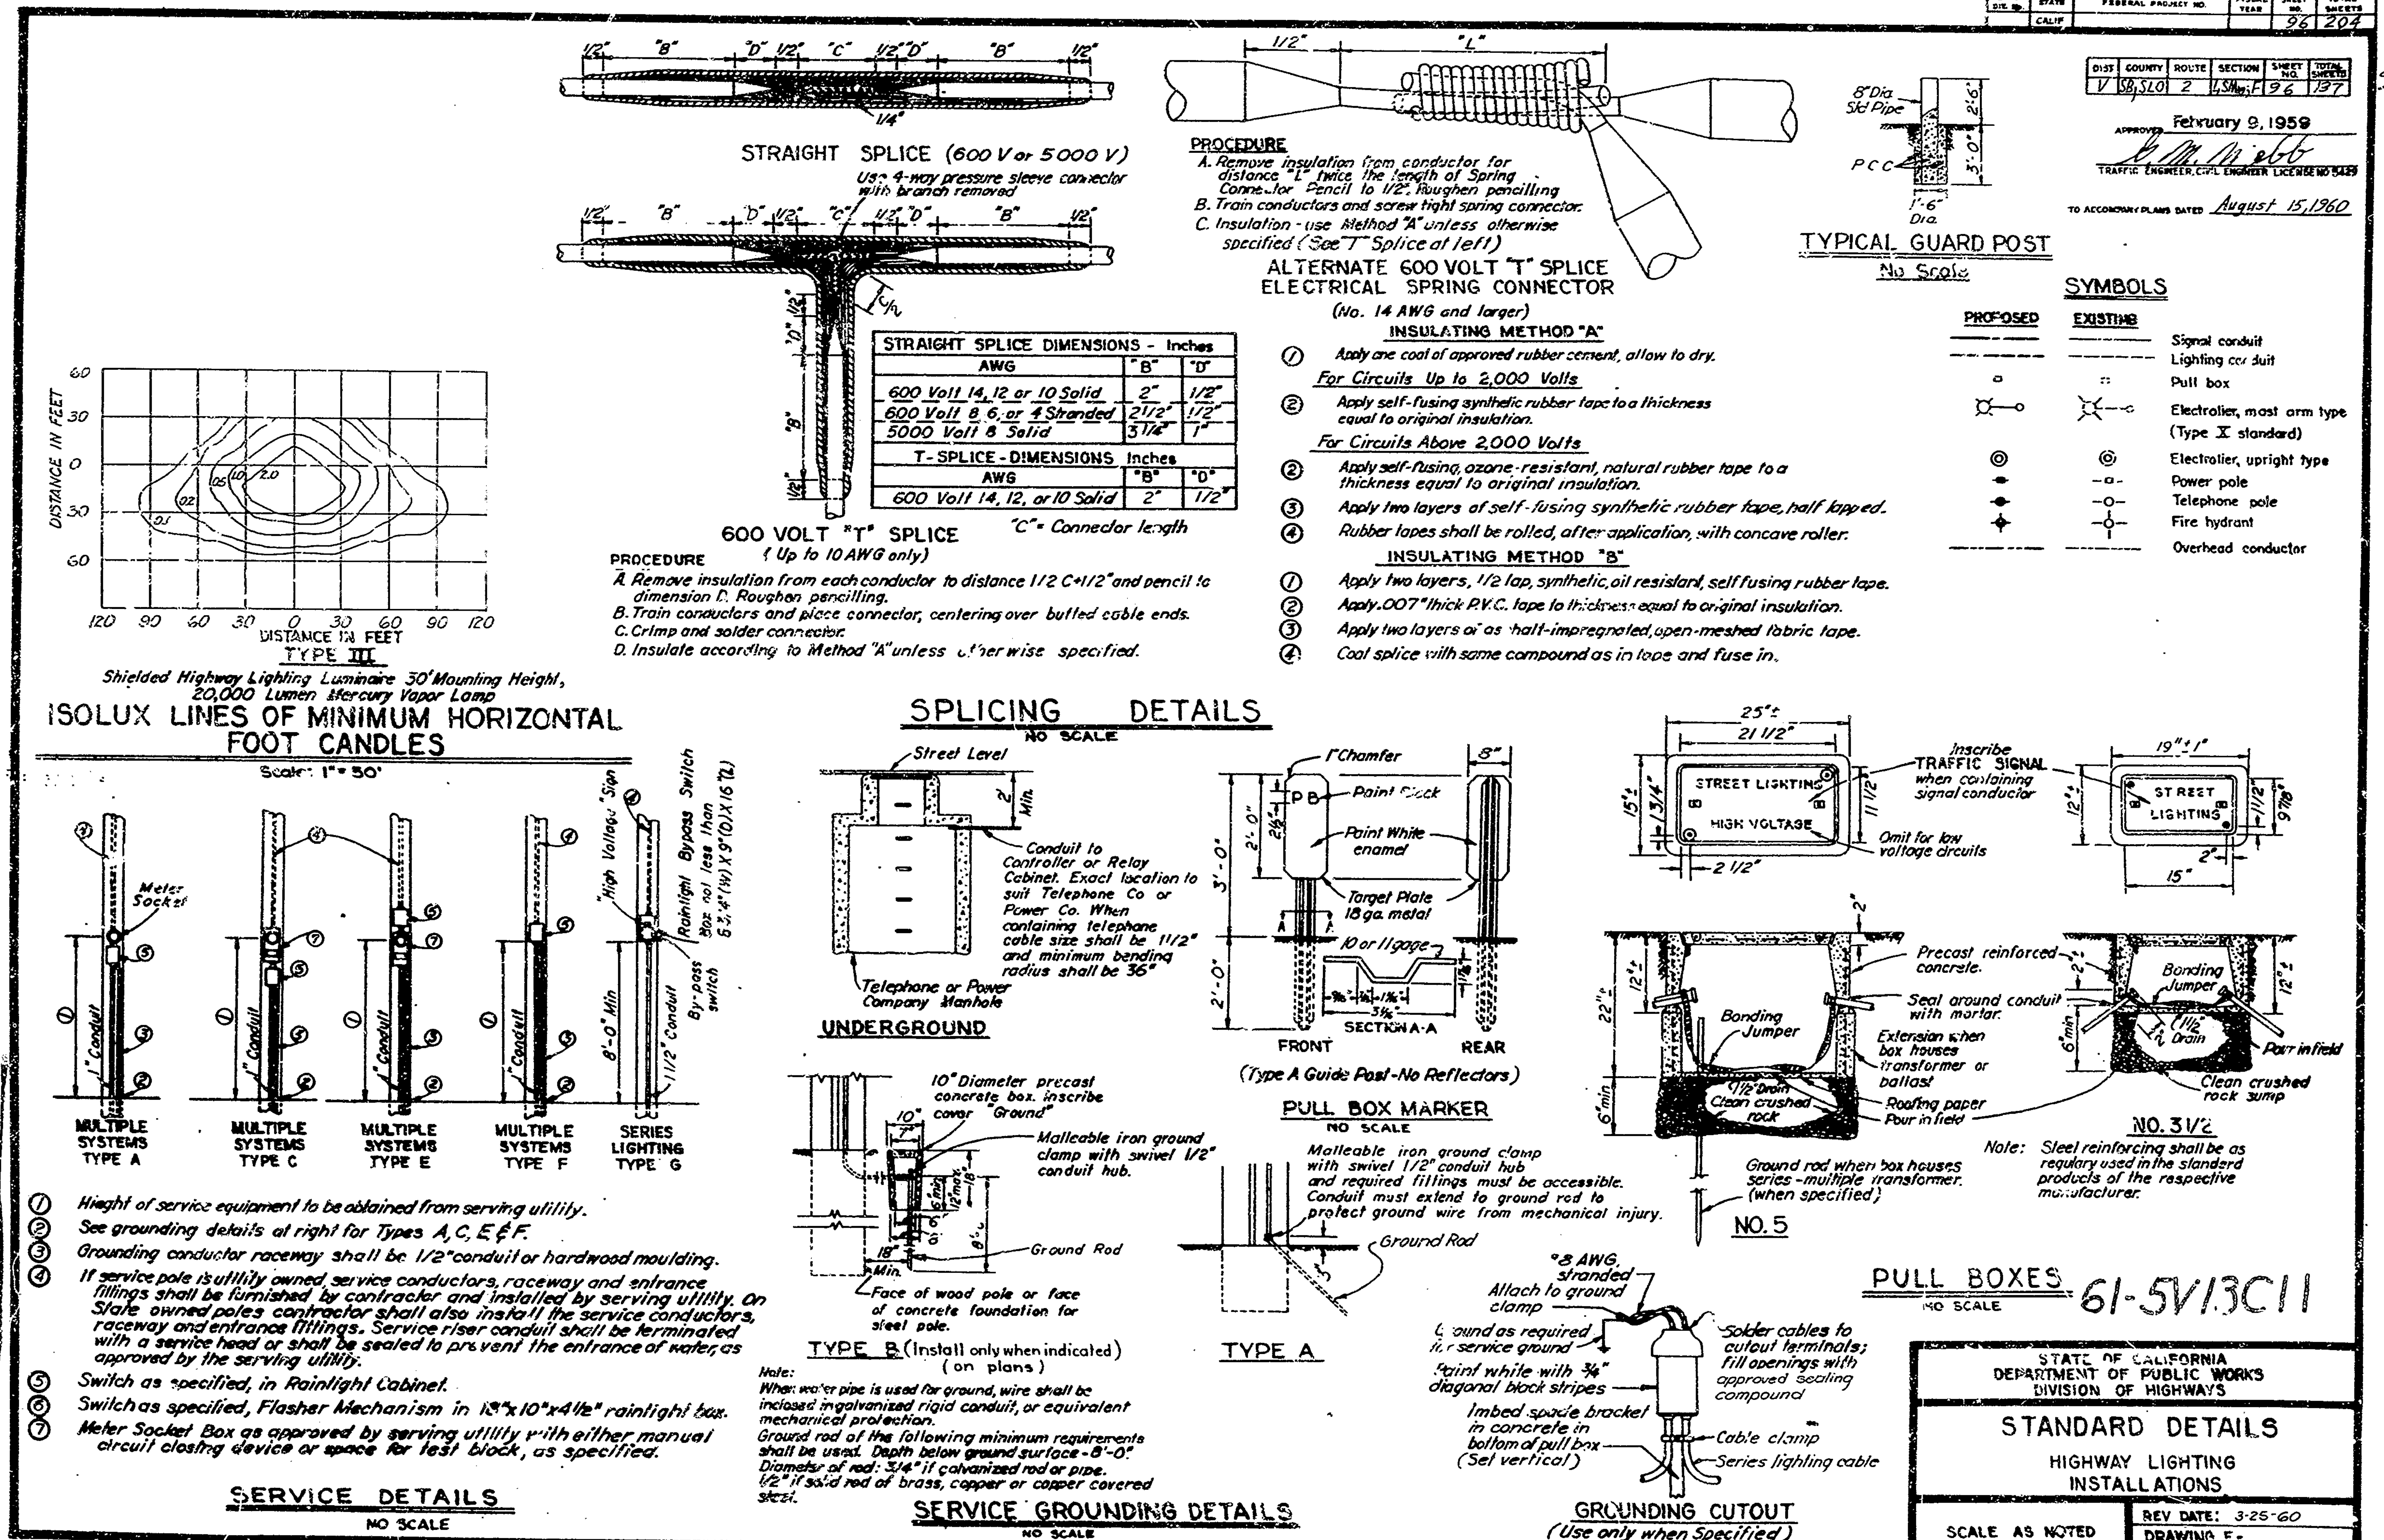
APPROVED February 9, 1959

TRAFFIC ENGINEER, CIVIL ENGINEER LICENSE NO 5429

TO ACCOMPANY PLANS DATED August 15, 1960



STRAIGHT SPLICE DIMENSIONS - Inches		
AWG	"B"	"D"
600 Volt 14, 12 or 10 Solid	2"	1/2"
600 Volt 8, 6, or 4 Stranded	2 1/2"	1/2"
5000 Volt 8 Solid	3 1/4"	1"
T-SPLICE-DIMENSIONS Inches		
AWG	"B"	"D"
600 Volt 14, 12, or 10 Solid	2"	1/2"

PROCEDURE (600 Volt "T" Splice)

A. Remove insulation from each conductor to distance 1/2 C+1/2" and pencil to dimension D. Roughen pencilling.
B. Train conductors and place connector, centering over butted cable ends.
C. Crimp and solder connector.
D. Insulate according to Method "A" unless otherwise specified.

PROCEDURE (Alternate 600 Volt "T" Splice)

A. Remove insulation from conductor for distance "L" twice the length of Spring Connector. Pencil to 1/2". Roughen pencilling.
B. Train conductors and screw tight spring connector.
C. Insulation - use Method "A" unless otherwise specified (See "T" Splice at left)

INSULATING METHOD "A"

(1) Apply one coat of approved rubber cement, allow to dry.

For Circuits Up to 2,000 Volts

(2) Apply self-fusing synthetic rubber tape to a thickness equal to original insulation.

For Circuits Above 2,000 Volts

(2) Apply self-fusing, ozone-resistant, natural rubber tape to a thickness equal to original insulation.
(3) Apply two layers of self-fusing synthetic rubber tape, half lapped.
(4) Rubber tapes shall be rolled, after application, with concave roller.

INSULATING METHOD "B"

(1) Apply two layers, 1/2 lap, synthetic, oil resistant, self fusing rubber tape.
(2) Apply .007" thick P.V.C. tape to thickness equal to original insulation.
(3) Apply two layers of as half-impregnated, open-meshed fabric tape.
(4) Coat splice with same compound as in tape and fuse in.

(1) Hieght of service equipment to be obtained from serving utility.
(2) See grounding details at right for Types A, C, E & F.
(3) Grounding conductor raceway shall be 1/2" conduit or hardwood moulding.
(4) If service pole is utility owned, service conductors, raceway and entrance fittings shall be furnished by contractor and installed by serving utility. On State owned poles contractor shall also install the service conductors, raceway and entrance fittings. Service riser conduit shall be terminated with a service head or shall be sealed to prevent the entrance of water, as approved by the serving utility.
(5) Switch as specified, in Raintight Cabinet.
(6) Switch as specified, Flasher Mechanism in 18"x10"x4 1/2" raintight box.
(7) Meter Socket Box as approved by serving utility with either manual circuit closing device or space for test block, as specified.

CALIF - TYPE STANDARDS

GENERAL AND INSTALLATION NOTES

1. All shafts and mast arms shall be galvanized. Bolts, screws, nuts, washers and tie rods shall be galv. or cadmium plated.
2. The lower 5' length of a 35' Type III-a pole shall consist of a 5' - #7 gage tapered section (8" O.D. to 8 11/16" O.D.) butt welded to the lower end of a 30' Type III pole
3. The lower 5' length of a 35' Type X-a pole shall consist of a 5' - #10 gage tapered section (8" O.D. to 8 11/16" O.D.) butt welded to the lower end of a 30' Type X pole.
4. The lower 5' length of a 25' Type II-a pole shall consist of a 5' - #10 gage tapered section (6 5/8 O.D. to 7 5/16 O.D.) butt welded to the lower end of a 20' Type II pole.

MAST ARMS

1. Luminaire mast arms shall be so curved that when mastarm is fastened to pole the luminaire end shall not be below top of pole or more than 1'-6" above.
2. The last 3" of the mast arm shall be straight and shall be horizontal with luminaire or traffic signal attached.
3. Connection between mast arm and pole shall be made by means of a raintight socket of a design permitting simple removal of the mast arm and providing a chased outlet for electrical conductors.

ANCHOR BOLTS

1. Each standard shall be supplied with 4 anchor bolts.
2. Each anchor bolt shall be provided with 6" of thread and a 4"-90° bend and shall be furnished with two nuts and two washers Washers shall be 5/16" X 2 1/2" O.
3. Threads may be cut or rolled. Bolts shall be galvanized or plated after threads are formed.
4. One anchor bolt shall be bonded to conduit.

4,000	1.0	0.76	0.33	0.16	0.13	0.06

GENERAL NOTES

1. Electroliers shall be placed a minimum of 4 feet from expansion joints.
2. Anchor bolts shall be held in position by means of suitable templates. Deviation from true position, vertical and height, shall not exceed 1/16". Nuts and threaded end of anchor bolts shall be galvanized or cadmium plated. Threads shall accept standard nuts without requiring use of tools or removal of protective galvanizing or plating.
3. Lighting conduits for electroliers and other conduits near the girder slab shall be laid within railing or curb sections, or laid below the girder slab when necessary.
4. Exposed conduits shall run either parallel or at right angles to the superstructure girders.
5. Where necessary to clear utilities, the conduit shall be carried over the utility ducts in long conduit sweeps.
6. Conduits shall terminate close to the ends at the pull box as specified in order to provide maximum clear space in box.
7. Conduit expansion fittings shall be installed wherever conduit crosses structure expansion joints of ½" or more.
8. Conduit expansion fittings shall be placed approx. parallel to the superstructure girders. One shall be placed at each structure expansion joint
9. All conduit shall be 1½" except as noted.
10. Metal pull boxes and frames shall be galvanized after fabrication.
11. Detailed shop drawings for metal pull boxes shall be submitted in accordance with the provisions of Section 55, of the Standard Specifications.
12. Conduit running to future electrolier bases shall be terminated per Detail "C".
13. Flush soffit luminaires shall be placed a minimum of 2 feet from the inside surface of girders and 1 foot from the inside surface of diaphragms.

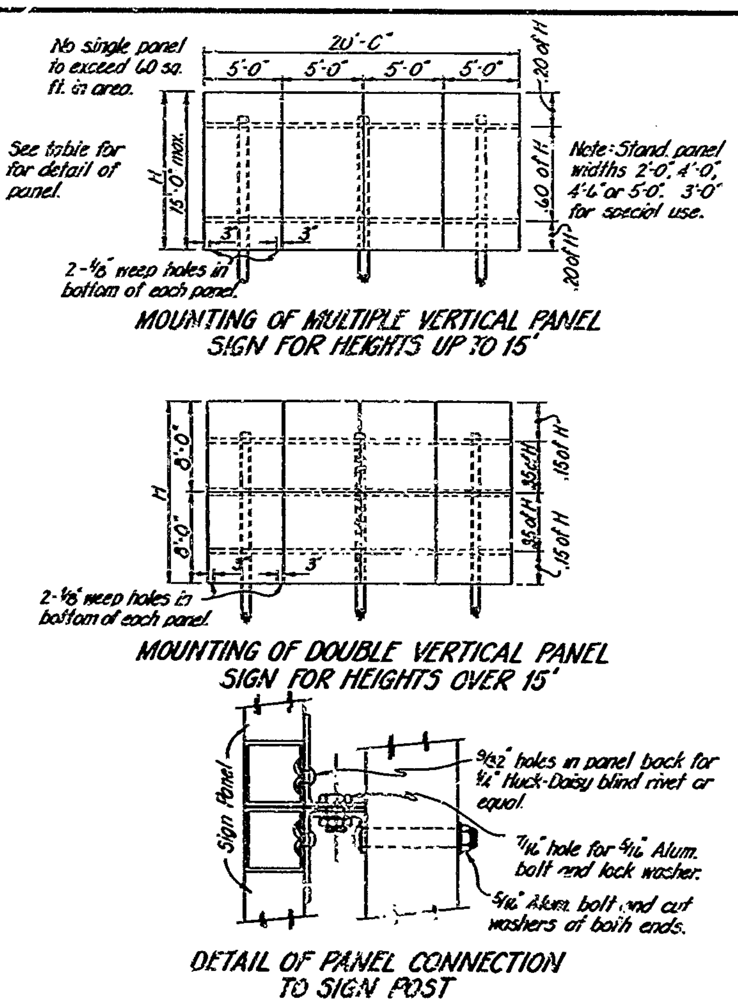
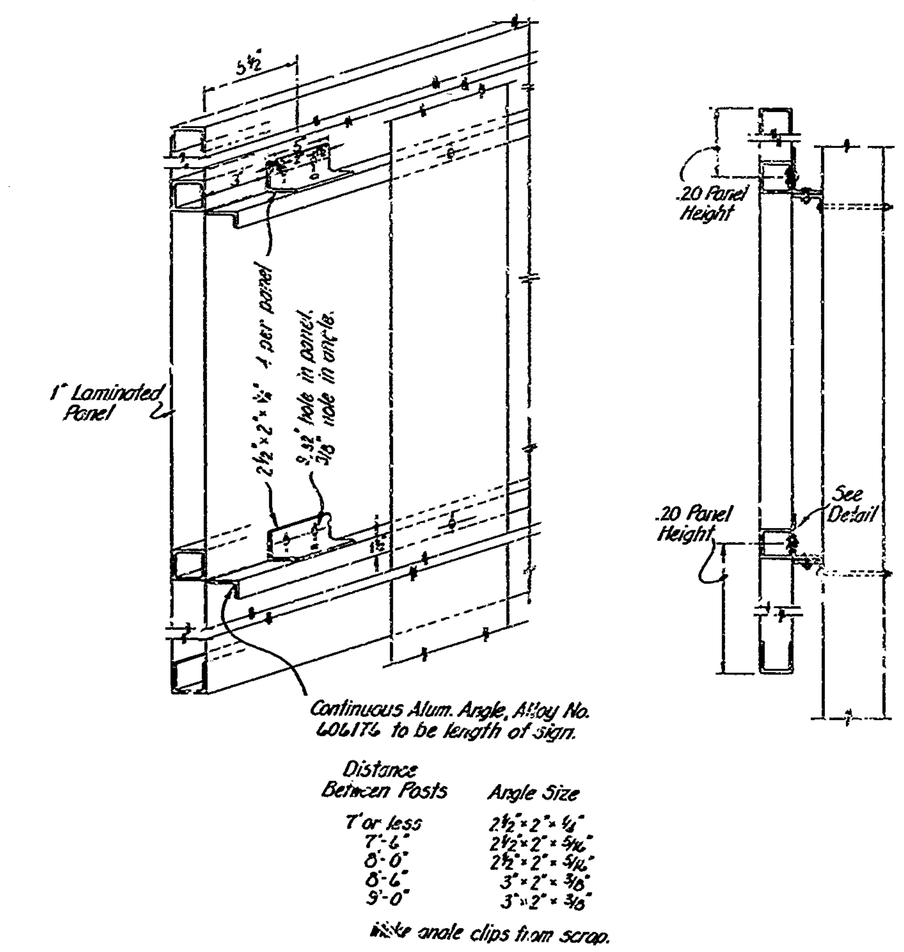
SINGLE HORIZONTAL PANEL FOR ALUMINUM SIGNS



MULTIPLE VERTICAL PANELS FOR ALUMINUM SIGNS



METHOD OF INSTALLING VERTICAL PANELS

Steel Notes:

1. All steel pipes will be hot-dipped galvanized after fabrication.
2. Size of pipe is American Institute of Steel Construction Specifications.
3. Top of pipe will be capped with 1/4" plate.
4. Apply aluminum impregnated calking compound between contact surfaces of aluminum and steel.
5. One splice permitted in pipe under 40' in length. Two splices for over 40' in length.

TABLE FOR STEEL POST DESIGN
(Based on length [L] of 7.5 ft. per post.)

General Notes:

1. Concrete, structure excavation and backfill, mounting of sign to be included in price paid for installing posts.
2. Depth table is for average soil conditions. Extreme soft or hard ground will require greater or less depth as determined by the Engineer.
3. Sign panels to be furnished by the State.
4. Hardware except aluminum angles for joists to be furnished by the state.
5. The location of signs are subject to revision by the Engineer.
6. All wood posts to be treated const. grade Douglas fir or better according to section 83-1.02A of the Standard Specifications.
7. Concrete incased posts are not to be used next to roadway.

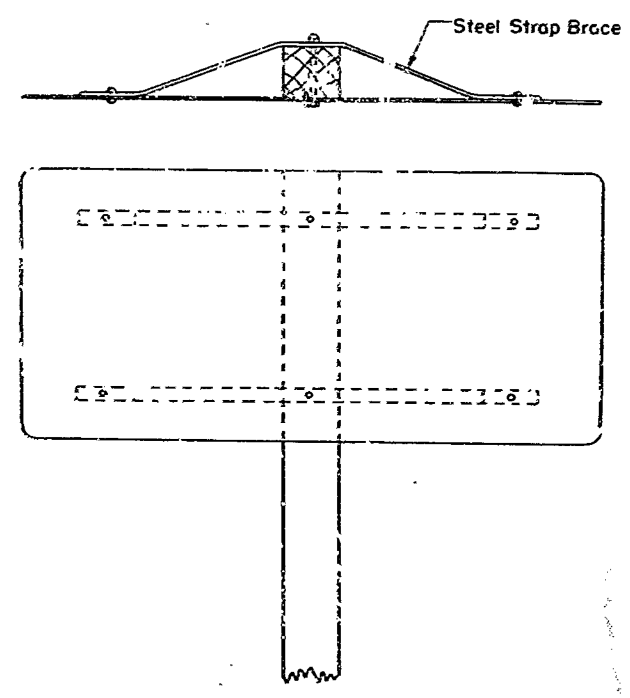
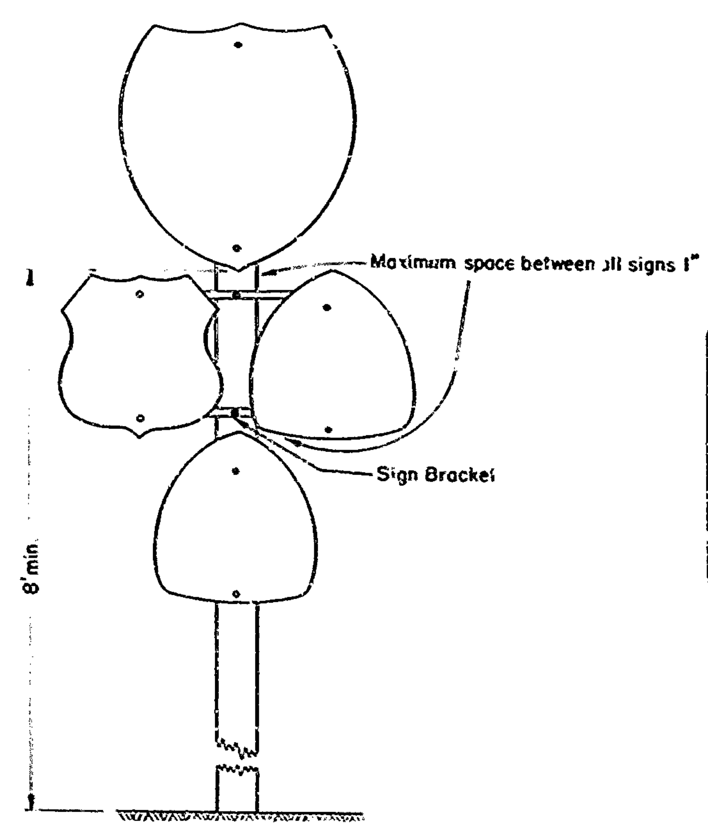
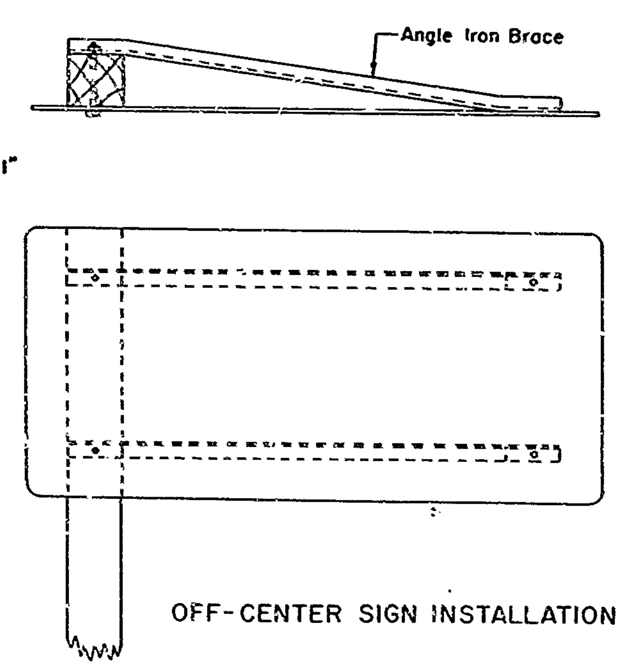
INSTALLATION ON LIGHTING STANDARD



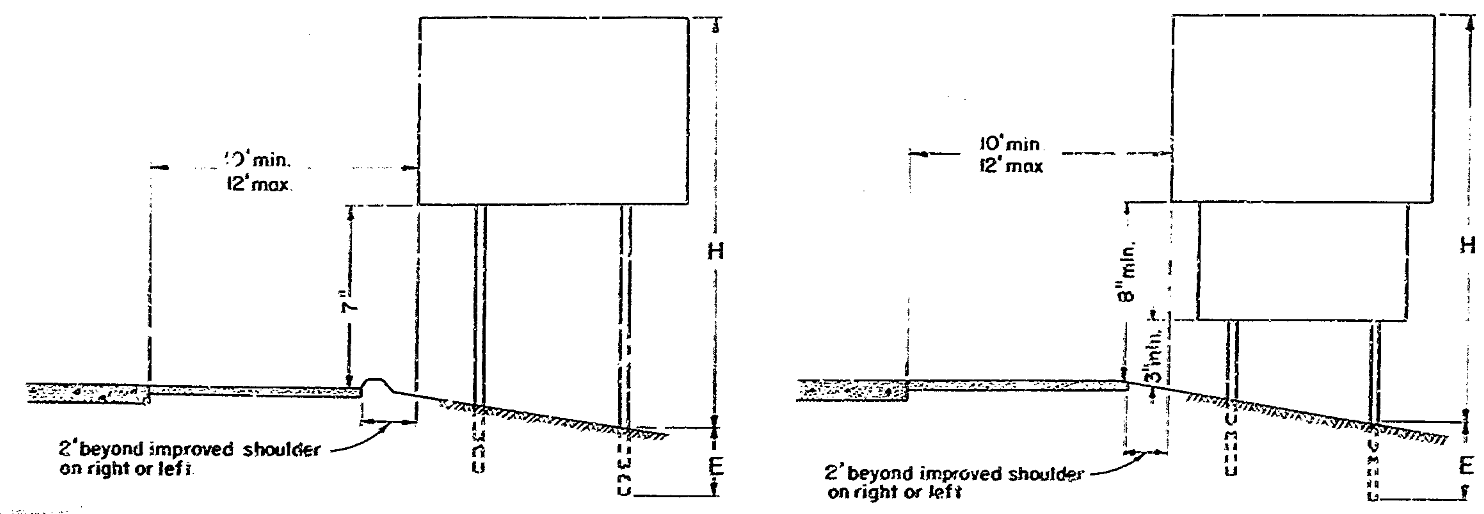
BALANCED SIGN INSTALLATION



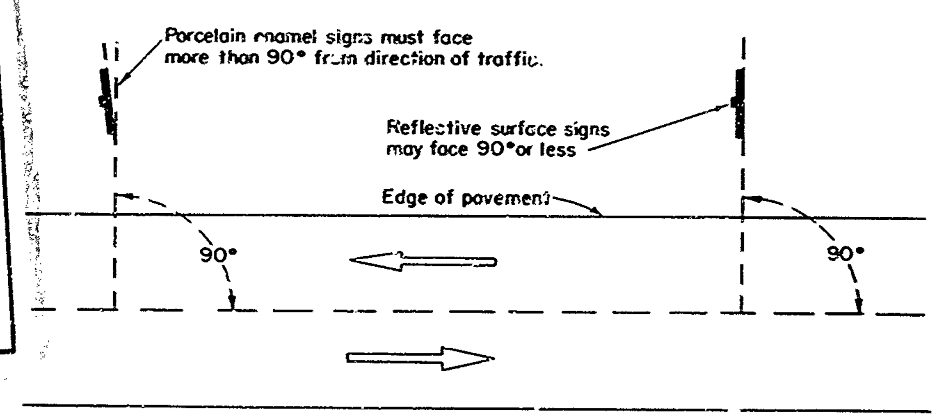
MULTIPLE INSTALLATION



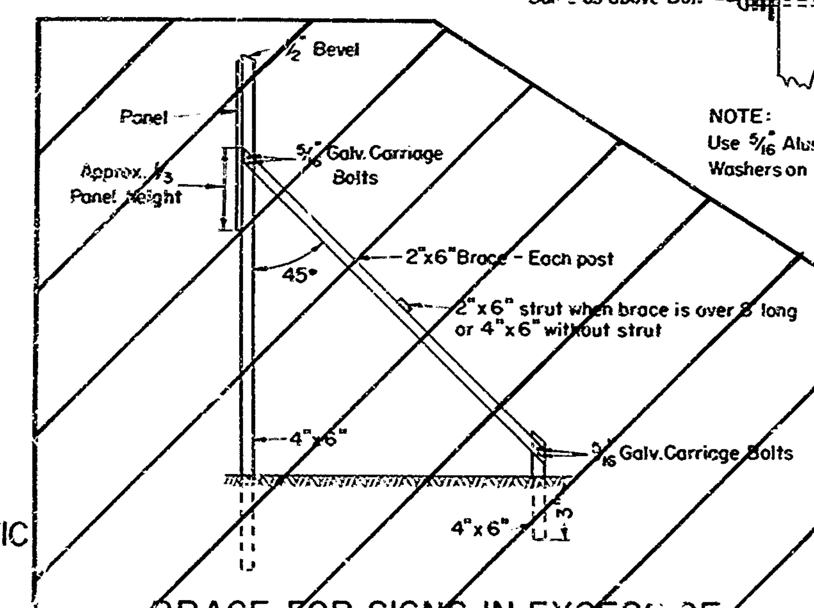
OFF-CENTER SIGN INSTALLATION



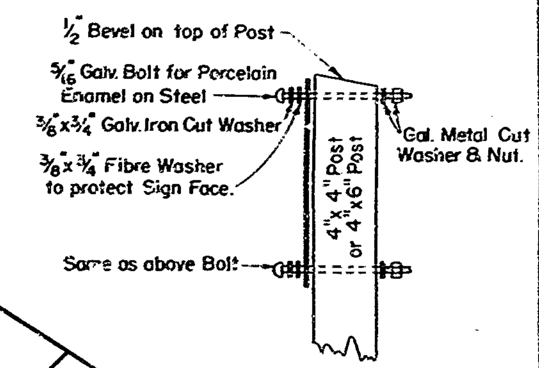
FREEWAY AND EXPRESSWAY LOCATIONS
(INCLUDING INTERSTATE ROUTES)



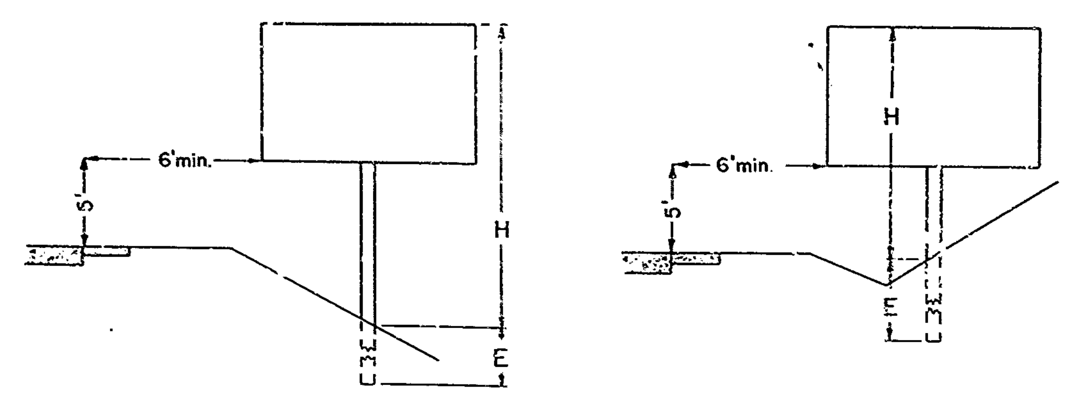
POSITION WITH RELATION TO DIRECTION OF TRAFFIC



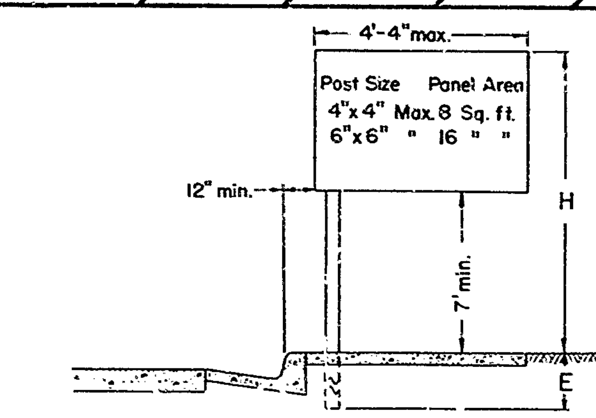
BRACE FOR SIGNS IN EXCESS OF H=10' & 30 SQUARE FOOT PANEL



NOTE:
Use 5/16" Aluminum Bolts and Washers on Aluminum Signs.

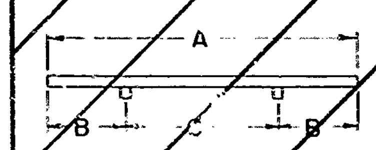


RURAL LOCATIONS



SIDEWALK LOCATIONS

NOTE: Lateral distance to sign edge should be 2' beyond the improved shoulder. The distance from the pavement must allow sufficent clearance for trucks or wide vehicles to park clear of pavement.



POST SPACING TABLE

Length of Sign A	Type of Panel	No. Posts	Overhang B	Post Spacing C

Use braces for post below and right of this line.

NOTES

1. All sign panels and mounting hardware to be furnished by State.
2. Exact size and location of sign posts to be determined by the Engineer.
3. All lumber to be S4S
4. When using 4"x6" post place 6" side normal to sign.

TABLE NO. IV
SIGN DATA

INSTRUCTIONS TO FABRICATOR

LAYOUT

SEE TABLE IV ON SIGN DATA SHEETS, SMALL SIGN SKETCH, AND TABLES I, II AND III, ON PLANS. SEE EXAMPLE NO. 1, THIS SHEET.

SELECTION OF STRUCTURAL MEMBERS

FOLLOW DIRECTIONS AS SHOWN ON "BALANCED, [redacted], UNBALANCED, AND/OR FULL CANTILEVER SIGN FRAMES" SHEETS. SEE EXAMPLE NO. 1.

DETAILS

REFER TO THE FOLLOWING SHEETS FOR DETAILS NOT SHOWN ON THE PLAN SHEETS:

1. POST SHEET OR SHEETS
2. JOINT AND MISCELLANEOUS DETAILS
3. FRAME JUNCTURE DETAILS
4. WALKWAY DETAILS NO. 1 AND NO. 2
5. WALKWAY SAFETY RAILING DETAILS
6. REMOVABLE SIGN PANEL FRAMES #1 AND #2.
7. WALKWAY MOUNTED BALLAST BOX
8. SIGN DATA SHEETS

BALLAST BOXES

FOR NUMBER OF BALLAST BOXES REQUIRED SEE TABLE VII ON THIS SHEET.

FULL CANTILEVER SIGNS - LOCATE BALLAST BOX IN WALKWAY BRACKET SPACE NEAREST TO CENTER OF SIGN PANEL. SEE EXAMPLES NO. 2 AND NO. 3.

UNBALANCED BUTTERFLY SIGNS ------------ WHERE TWO BALLAST BOXES ARE REQUIRED, MOUNT BALLAST BOXES IN WALKWAY BRACKET SPACE NEAREST TO CENTER OF EACH SIGN PANEL. SEE EXAMPLE NO. 1. WHERE ONLY ONE BALLAST BOX IS REQUIRED PLACE THE BALLAST BOX IN THE WALKWAY BRACKET SPACE ADJACENT TO THE POST AND ON THE SIDE WITH THE LARGER SIGN PANEL. SEE EXAMPLE NO. 5.

BALANCED BUTTERFLY SIGNS - ON TEN FOOT SIGNS LOCATE BALLAST BOX AT CENTER OF SIGN. SEE EXAMPLE NO. 4. ON ALL OTHERS THE BALLAST BOX MAY BE LOCATED ADJACENT TO AND ON EITHER SIDE OF THE POST. SEE EXAMPLE 4.

WALKWAY BRACKETS

THE MINIMUM WALKWAY BRACKET SPACING WHERE BALLAST BOXES ARE LOCATED SHALL NOT BE LESS THAN 4'-4". SPACE ALL OTHERS TO SUIT, MAINTAINING UNIFORM SPACING WHERE POSSIBLE. MAXIMUM SPACING SHALL NOT EXCEED 5'-6". SEE EXAMPLE NO. 4.

LIGHTING FIXTURE SUPPORTS

WHERE DISTANCE FROM WALKWAY BRACKET TO END OF SIGN PANEL EXCEEDS 16" INCHES, EXTEND SUPPORTS TO NEXT WALKWAY BRACKET. SEE EXAMPLE NO. 3.

NOTE:

SIGNS ARE SHOWN AND DIMENSIONED LOOKING IN THE DIRECTION OF TRAFFIC. DOUBLE-FACED SIGNS ARE SHOWN AND DIMENSIONED LOOKING AHEAD ALONG STATIONING.

SAFETY RAILING:

ON BUTTERFLY TYP. SIGNS 12' AND OVER, END SAFETY RAILING AT WALKWAY BRACKETS ADJACENT TO POST. SEE EXAMPLES NO. 1, 4, 5 AND 6.

EXAMPLES SHOWN ON THIS SHEET ARE FOR ILLUSTRATIVE PURPOSES ONLY AND ARE NOT A PART OF THE CONTRACT.

Notes:
1. Enter tables with "La", the shorter frame side, and find "Lb" the corresponding longer frame side. "La" may correspond to either "L1" or "L2" as found in "Unbalanced Butterfly Sign Frames" Sheet and Table IV on "Sign Data" sheets.
2. "ϕ" denotes round solid bar. "P" denotes Double - Extra Strong Pipe.
3. For Post & Footing Details see "Posts - Type I-S thru VII-S" & "Post - Types I thru VII" sheets.

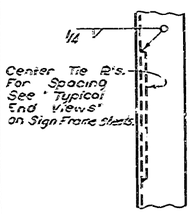
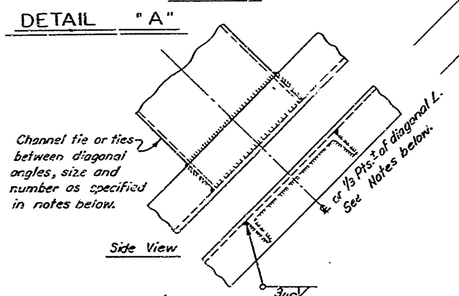
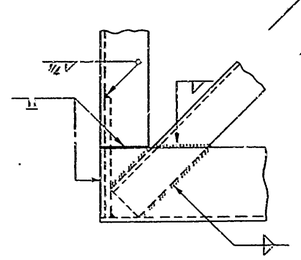
DETAIL "A"



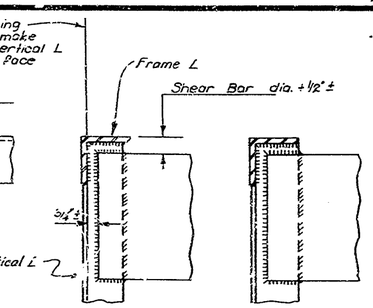


DETAIL "E"

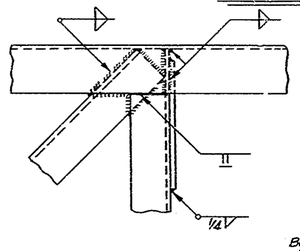
Notes:
1. For "W" = 40", 50" & 60" - No ties between diagonals.
2. For "W" = 70", 80" & 90" - One 9Lx13.4#/ft tie located at ℄± of diagonals.
3. For "W" = 100", 110" & 120" - Two 8Lx11.5#/ft ties located at 1/3± Pts. of diagonals.



DETAIL "C"

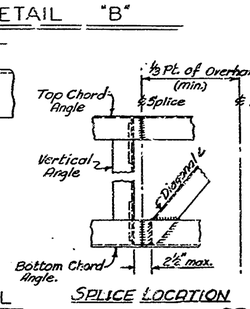


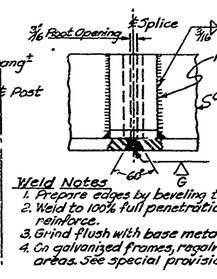
DETAIL "B"



DETAIL "B" OPTIONAL

Note: Diagonal not shown
Side View



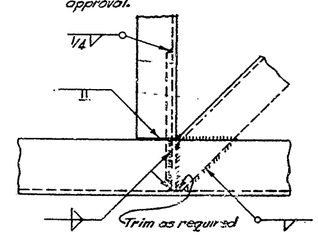


Weld Notes
1. Prepare edges by beveling to L shown.
2. Weld to 100% full penetration and reinforce.
3. Grind flush with base metal.
4. On galvanized frames, regalv welded areas. See special provisions.

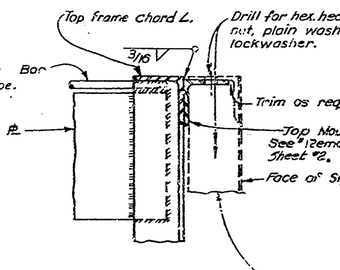
SPLICE LOCATION

SPLICE DETAILS

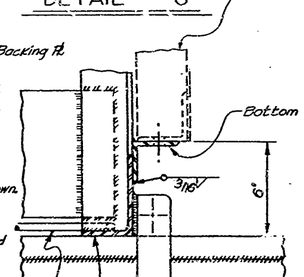
Note: Continuous chord member desired--Splice only where necessary. Alternate splice details are subject to Engineer's approval.



DETAIL "D"



DETAIL "G"



Note:
When 4" x 3" frame chord L is used on bottom, increase the typical 2½" vertical leg of Mounting Clip L to 3" as shown below. All others same as specified in "Removable Sign Panel Frames" Sheets.

DETAIL "H"

GENERAL NOTES

SPECIFICATIONS:
DESIGN: A.A.S.H.O. DATED 1953 WITH SUBSEQUENT REVISIONS AND MODIFICATIONS.

CONSTRUCTION: STANDARD SPECIFICATIONS, DIVISION OF HIGHWAYS, AND THE SPECIAL PROVISIONS.

LOADING:
WIND LOADING: 30 P.S.F. NORMAL TO FRAME AREA.
WALKWAY LOADING: DEAD LOAD + 300# CONCENTRATED LIVE LOAD + 30% LIVE LOAD IMPACT.

UNIT STRESSES:
STRUCTURAL STEEL: F_s = 18,000 P.S.I.
REINFORCED CONCRETE: F_c = 20,000 P.S.I.
F_s = 1,200 P.S.I., N = 10
FOOTING SOIL PRESSURE: 1-1/4 TONS/SQ. FT.
ALLOWABLE UNIT STRESSES DUE TO WIND LOAD OR WIND LOAD IN COMBINATION WITH OTHER FORCES, ARE INCREASED 33-1/3%.

MINIMUM CLEARANCE: VERTICAL ROADWAY CLEARANCE 17'-0"
REINFORCEMENT EMBEDMENT IS CLEAR TO OUTSIDE OF BAR AND IS 2" TO MAIN REINFORCEMENT, EXCEPT AS NOTED.

WELDING: ALL WELDING CONTINUOUS UNLESS OTHERWISE SHOWN ON THE PLANS. ALL WELDING TO BE DONE IN ACCORDANCE WITH THE A.W.S. SPECIFICATIONS DATED 1956.

NOTE: FOR ELECTRICAL DETAILS SEE "LUMINAIRE AND LIGHTING STANDARDS" SHEET AND LIGHTING PLANS.

GENERAL NOTES, CONT'D.

MATERIALS:
BARS, PLATES, SHAPES, AND ANCHOR BOLT ASSEMBLIES TO BE STRUCTURAL STEEL A.S.T.M. DESIGNATION "A-7". SHEET TO BE CARBON STEEL SHEETS, A.S.T.M. DESIGNATION "A-245", GRADE "C".
PIPE POSTS TO BE WELDED AND SEAMLESS STEEL PIPE, A.S.T.M. DESIGNATION "A-53", GRADE "B". PIPE POSTS FABRICATED FROM A-7 STEEL WILL BE ACCEPTED.

FINISH:
FOR SURFACE TREATMENT OF EXPOSED METAL SURFACES NOT SHOWN TO BE FURNISHED GALVANIZED SEE THE SPECIAL PROVISIONS.

Shear Bar	Radius "R"
½"ϕ	1¼"±
⅝"ϕ	1½"±
¾"ϕ	2"±

Shear Pipe	Radius "R"

HANDHOLE DETAILS

Typical for Types "B_1", "B_2" & "C"

Bolt Size	Req'd Bolt Tension	Equivalent Torque
5/8"	17,250 lbs.	180 lb.-ft.
3/4"	25,600 lbs.	320 lb.-ft.
7/8"	32,400 lbs.	470 lb.-ft.
1"	42,500 lbs.	710 lb.-ft.
1 1/8"	50,800 lbs.	960 lb.-ft.
1 1/4"	64,500 lbs.	1,350 lb.-ft.

BOLT TENSION & TORQUE VALUES

Notes:

1. All high-strength bolt, nut and washer material shall conform to requirements as specified in A.S.T.M. Designation: A 325.
2. Drilled holes for high-strength bolts shall not exceed nominal bolt dia. by more than 1/16" max.
3. All nuts shall be tightened to give the bolt tension values listed in table above. Nuts shall be in motion when torque is measured.
4. Contact surfaces between high-strength bolt head & nut shall be free of paint, dirt, oil, loose scale, burrs, pits & other defects that would interfere with the development of friction between parts.
5. Bottom of frame to be level.
6. All bolts, nuts, capscrews and washers shall be cadmium plated.
7. In all cases, sign frame shall be supported at top of post. Bearing surface of top of post shall be finished true.
8. At lower juncture connection, shims shall be used where any clearance exists between bottom of frame and post plate prior to tightening of bolts in lower connection.

BALLAST MOUNTING CHASSIS

No Scale

BALLAST NOTES

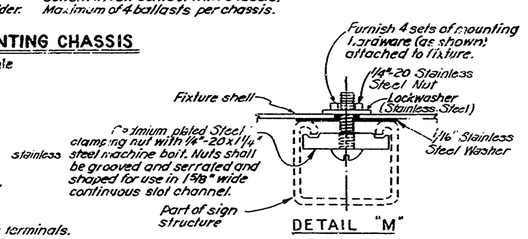
Each ballast shall be fused with a 1¼"x ¼" slow-blow glass tube fuse - 2½ amp for 2-lamp ballast and 1 amp for 1-lamp ballast.

Ballasts shall be rated at 300 ma.

Ballasts shall be secured by 8-32 machine screw studs, soldered to chassis with nuts and lockwashers.

Fuseholders shall have insulating base and screw terminals.

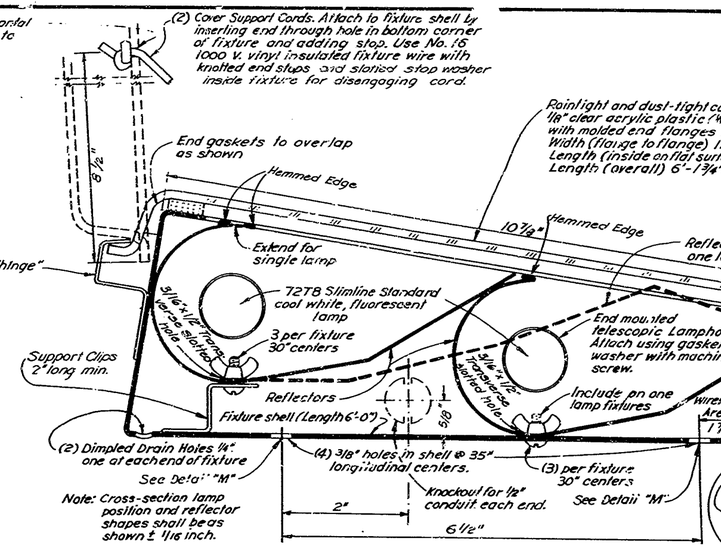
For number and location of ballast boxes see sign structure plan titled "Walkway Mounted Ballast Box".



FIXTURE MOUNTING ON CONTINUOUS SLOT CHANNEL

Full Scale

Drill hole in horizontal end flange close to vertical flange.



SECTION - LIGHTING FIXTURE

Full Scale

FIXTURE NOTES

Two lamp fixtures shall be used for signs over 70" in vertical dimension. One lamp fixtures for 70" signs and smaller.

Lighting fixtures shall be fabricated of 0.064" clad 3003 H-14 aluminum, unless otherwise indicated. Machine screw parts and lockwashers for fixture shall be aluminum, unless otherwise indicated.

Reflectors shall be made of 0.020" (min.) thickness aluminum with specular finish, and shall be 69" long. The finish shall be at least equivalent to that of Alcoa Alzak Type 2 Lighting Sheet in degree of specularity, corrosion and abrasion resistance and ease of cleaning. Reflectors shall be easily removable for cleaning without need for permanently distorting the reflector shape. Acceptable reflector materials will be ① Alcoa Alzak Type 1 Lighting Sheet, or equal, ② Alcoa Alzak Type 2 Lighting Sheet, or equal, ③ "Mylar" plastic film with specular metallized backing bonded to sheet aluminum (Dynasyl or equal).

Machine screws shall be 8-32 with nuts and lockwashers (except as noted).

Manufacturer shall submit five copies of shop drawings to the Engineer for approval prior to fabrication if fixtures have not previously been approved.

For method of mounting fluorescent fixtures see Walkways plan titled "Walkway Details No. 2".

After fabrication metal parts shall be thoroughly cleaned and degreased and shall have a well finished appearance. Painting will not be required.

17	1350	1118
18	1350	1179
19	1500	1249
20	1500	1310

Notes
For sign structure with 21 or more lamps the load shall be split into two ballast box groups with separate switching supplied independently from two SM transformers in separate pull boxes.
See Sign Format Sheet for size of pan.
Use one SM transformer for each sign structure unless otherwise indicated or required.
Use two 2-lamp ballasts wherever possible.
Input to ballasts (90% pf) average 75 VA per lamp.
*Does not include SM transformer losses which are approximately 10% of load.

TYPICAL FIXTURE WIRING DIAGRAM

WIRING NOTES

Wiring between ballast box and nearest fixture and between fixtures shall be run in ½" liquid-tight flexible conduit. Flexible conduit shall be secured to nearest walkway structural member bracket using galvanized bonding strap and brass machine screws.

Ballasts and terminal boards shall be marked with legible symbols, conductors shall be tagged and their identification marked on the corresponding terminal on the terminal board as shown on the Typical Fixture Wiring-Wiring Diagram.
See Special Provisions for additional specifications.

GENERAL NOTE - METALS

Where steel is indicated part shall be hot-dip galvanized after fabrication. Where sheet steel is indicated, part shall be fabricated from hot-dipped galvanized sheet steel. After fabrication, edges and flaws in galvanizing shall be cleaned and painted with two coats of Mil. Spec. Mil-P-21035. Other metal parts shall be made of bronze, phosphor bronze, brass, copper beryllium, or AISI Type 316 Stainless steel unless otherwise noted
