## 1. Introduction

The County Board of Supervisors established a mission statement promoting the economic, environmental, and social quality of life in San Luis Obispo County. This vision is incorporated into the preparation of this Pavement Management Report. A well-maintained road system enhances mobility throughout the County and addresses these communitywide results. A well-maintained road system not only supports the multi-modal needs of the community but also supports emergency response, tourism, commerce, agriculture, and recreation. By prioritizing our efforts, we have developed the following plan to maximize the benefits to all road users.

County Budget target performance measures, as adopted by the Board of Supervisors related to pavement management, include a Countywide average pavement condition index (PCI) of 65, and that 2/3 of County roads have a PCI rating of 60. These goals are pursued using the following strategies:

1. Maintain the Good Condition roads to Good Condition.
2. Improve the Poor Condition high- and medium-volume roads.
3. Incrementally improve the Poor Condition low-volume roads.

Since 1997, the Department of Public Works has maintained a formal Pavement Management Program (PMP) for documenting road conditions, forecasting pavement maintenance, and scheduling road maintenance based on funding.

This program prioritizes pavement management to optimize limited funds available. This strategy applies the best available pavement preservation techniques and relies on a combination of road classification and PCI targets to prioritize selecting roads for maintenance.

### Policy on Road System Priorities

It is the policy of the Board of Supervisors to prioritize the funds and resources allocated to the Public Works Department in the following way:

#### First Priority: Maintenance

- Provide routine maintenance.
- Manage pavement resurfacing.
- Perform bridge maintenance and replacement.

#### Second Priority: Safety Enhancements

- Reduce collisions with signage/stripping.
- Improve sight distance and roadside conditions.
- Realign and widen roads.

#### Third Priority: System Betterments

- Implement County bike plan.
- Correct deficiencies (drainage “missing links”).
- Improve capacity (circulation studies).
- Implement community street designs.

## 2. Background

### Road Assets

Per the FY 2022-23 Roads Maintenance Report, the road system structures and assets include:

- 1,350 maintained road miles
  - 1,106 miles of paved roads
  - 244 miles on unpaved roads
- 1,537 ADA curb ramps
- 190 bridge structures
- 141 cattle guards
- 23 signalized intersections
- 87 roadside flood control basins
- 5,679 road drainage culverts
- 26,100+ road signs

Of the 1,350 miles of County-maintained roads, 1,104 miles are paved with Asphalt Concrete (AC), and two miles are Portland Cement Concrete (PCC) roads. The rest are gravel and not addressed in this report.

Figure 2-1: Repair Costs vs. Pavement Conditions

### Typical Cost Per Mile

- Micro Surfacing roadways cost \$115,000 per mile including prep work by County crews.
- Asphalt overlay contracts have cost between \$500,000 and \$600,000 per mile.

The above chart from the 2013 FHWA Pavement Remaining Service Interval Implementation Guidelines illustrates the relationship between repair costs and pavement condition over time. Good Condition roadways with a PCI of 65 or better keep traffic flowing with little impact on motorists, and as this graphic shows, can be cost-effectively maintained.

## Historical Data

Figure 2-2: Historical PCI for San Luis Obispo County Roads

Pavement Program funding and construction costs have fluctuated over the years, which has affected the program’s efficiency, as shown in Figure 2-2 above. As presented to the Board in 2022, the Urban and Suburban roads were generally in Good Condition, with an average PCI of 63. At the time, 144 miles of low-volume, Poor Condition Rural roads contributed to the lower Countywide PCI average of ~60. Since then, staff have implemented strategies to improve these roads.

### Past Practices – 2022 and Prior

The primary Performance Measure is achieving and maintaining a Countywide average PCI of 65. The Countywide average in 2015 was 61, with only about half of all roads in Good Condition. Recognizing funding uncertainty and the need to maintain and improve the deteriorating, more heavily traveled roads, Public Works adopted the following Pavement Program Maintenance Strategies and associated tiers:

1. Maintain the Good Condition roads to Good Condition (Tier 1).
2. Improve the Poor Condition high- and medium-volume roads (Tier 2 and 3).
3. Provide minimal corrective maintenance on the Poor Condition low-volume roads (250 miles of Tier 4).

These strategies prioritized Pavement Program funding toward the heavily traveled Urban and Suburban roads over the Rural and low-volume roads.

### 3. Board of Supervisors Policy

Since 2015, the overall condition of Urban and Suburban roads has improved despite the slight decline of the Countywide average PCI. Most Urban and Suburban roads are in Good or better condition. Additionally, several miles of Poor Condition low-volume roads (Previously Tier 4) have improved to Fair or better condition through heavy corrective maintenance, alternative treatments, and inclusion in resurfacing contracts.

The figure to the right illustrates the thresholds for each pavement condition category used in discussing roads, classifications, and goals. In 2022, the Board supported the strategies detailed in the table below, which now govern the practices within the PMP.

#### Current Practices – 2022 and Beyond

Considering recent efforts to balance available funding to incrementally improve Poor Condition roads, and limited funding to substantively improve and maintain the Countywide PCI to a target of 65, it is necessary to prioritize maintaining roads in a State of Good Repair and incrementally improving the pavement condition of all roads. Replacing the Tier 1-4 system with more easily understandable road classifications and minimum PCI targets, as detailed below, will further this strategy.

The Performance Measures of achieving and maintaining a Countywide average PCI of 65 and having 2/3 of all roads with a PCI of 60 or higher will be retained. However, the strategies and priorities to achieve those performance goals have been updated.

#### Strategies and Priorities:

1. Maintain the Good Condition roads to Good Condition.
2. Improve the Poor Condition high- and medium-volume roads.
3. Incrementally improve the Poor Condition low-volume roads.

The most substantive change in strategy away from past practice is a new focus on Poor Condition low-volume roads. The past practice of focusing on heavily traveled roads and urban areas was very successful. Most of the urbanized areas exceed the County's targets with few Poor Condition roads. Those few remaining communities not meeting the target are programmed for work over the next 3+ years.

**PAVEMENT MANAGEMENT REPORT**  
**Department of Public Works**

Conversely, low-volume roads outside the urban areas have continued to decline, as they were previously limited to receiving only the most basic maintenance work. Based on support from the Board, the current practice focuses on improving the Poor Condition low-volume roads. The goal is to have 0 miles of road with a PCI of less than 35.

*Table 3-1: Road Classification Pavement Condition Index (PCI) Targets*

Category	Description	Miles	PCI Target
Urban	Any road inside URLs/VRLs	354	Good or better (min. 55 PCI) and an average of 70
Suburban*	Arterials and Collectors outside URLs/VRLs	404	Good or better (min. 55 PCI)
Rural*	Local roads outside URLs/VRLs	348	Fair or better (min. 35)

*\*Ending 2021, the Suburban and Rural categories together included 144 miles of Poor Condition (PCI<40) low-volume roads.*

## **4. Funding**

In 2015, the County's estimated State of Good Repair annual maintenance needs were \$29 million, including about \$12 million for the Pavement and Bridge Programs. Revenues at that time were about \$22 million per year, leaving a \$7 million shortfall, with the bulk of that shortfall impacting Pavement Management needs. These amounts did not include funds for Safety and Operational Betterment projects, for which the County relies on outside programs such as grants from State and Federal programs and Road Impact Fees.

The County began to receive SB1 ("new gas tax") funds from the State in 2018. Receipt of these funds requires that agencies maintain a Pavement Management Plan and direct those funds accordingly. While SB1 provided much-needed pavement management funds, it also reduced the program's dependency on one-time County General Fund contributions. Although project costs continued to rise, by 2022, the funding gap had reduced to an average of \$5M per year, still impacting both the Pavement and Bridge programs.

By 2022, estimated roads maintenance needs under the existing Board-adopted policies required more than \$32 million per year, including \$15 million for the Pavement and Bridge Programs. This represents a total increase of \$3 million (about 2% per year) since 2015. These cost increases are primarily due to construction and material cost escalation, increasing design and mandate requirements, and reductions in eligible reimbursements from FHWA/Caltrans supporting the Bridge Program. The new federal surface transportation bill, the Infrastructure Investment and Jobs Act (IIJA), has largely reversed recent Bridge Program reimbursement reductions, but not enough to offset project cost increases.

### **Other Impacts**

During the winter storms in 2023, County roads were severely damaged. Public Works has identified and initiated roadway repairs at 879 damage sites Countywide. These repairs will continue through at least 2027 at an estimated cost of \$55M. Although largely reimbursable by FEMA and FHWA, the Roads Maintenance budget will be impacted. Moreover, severe weather, even if not immediately damaging to the road surface, impacts the overall roadway condition and accelerates deterioration. The full extent of these impacts on the surface condition (Countywide PCI) will be better known once the triennial pavement assessment is completed in the fall of 2025.

The State's original estimates were that SB1 would generate more than \$10M in revenue per year for the County. Actual revenues have been in the \$9M range, and there is no expectation of substantive increases in the near future.

# PAVEMENT MANAGEMENT REPORT

## Department of Public Works

Figure 4-1: Road Conditions Based on Various Budgets

Prior to 2022, maintaining County roads to their current condition (no improvement) required approximately \$10M per year – factoring in recent increases in the cost of materials – the same level of service requires almost \$13M. Available Pavement Program funding has averaged ~\$9M per year for the last five years, still short of the \$13M needed to maintain the status quo (not improve the PCI). Public Works does not foresee appreciable changes in available funding in the near future. The proposed 3+ year plan is conservatively based on this historic funding.

Should revenues from SB1 come higher than expected, or if project savings from completed Pavement Management projects are realized, these funds will be reinvested into the program to fill the approximate \$4M per year funding gap. Additional and recurrent program funding is necessary to reverse the current projected decline in the Countywide average PCI. Based on current funding levels and project costs, staff projects a Countywide PCI in the mid-50s in the next five years.

## 5. Routine Maintenance Techniques

### Routine vs. Preventative Maintenance

Routine Maintenance consists of day-to-day activities scheduled by maintenance staff to maintain and preserve the condition of the roadway system, while Preventative Maintenance consists of minor and major rehabilitation projects. Minor projects are non-structural enhancements made to the existing pavement sections to eliminate age-related surface cracking, extending the life of the existing pavement. Major rehabilitation consists of structural enhancements that both extend the service life of an existing pavement and improve its load-carrying capability.

Historically, the County has used two main rehabilitation techniques to preventatively maintain the road system: micro surfacing and asphalt overlays. Supportive work for these rehabilitation projects includes dig outs, tree trimming, shoulder clearing, crack sealing, and other essential roadway preparations. To reduce costs and incrementally improve Poor Condition low-volume roads, the County has increased the amount of major patching work and begun to place double-layer micro surfacing in certain conditions.

Table 5-1: Maintenance Types

Routine Maintenance	Preventative Maintenance
Pothole Patching	Chip Seal
Major Patching	Micro Surfacing
Culvert Cleaning	Slurry Seal
Crack Sealing	Overlays
Shoulder Backing	Reconstruction
Striping and Signage	Double Micro

Both routine and preventative maintenance programs are pavement preservation-centric, intended to preserve County roadways to a state of good repair—being passable to highway-legal vehicles. Roadway betterments such as widening or realigning are beyond the limited funding capacity of these programs. Some maintenance projects are subject to mandated improvements, most notably guard railing and accessible ramp modernization.

## 6. Report Card

As adopted by the Board with the Annual Budget, the Performance Measures related to Pavement Management include 1) a target Countywide PCI of 65 and 2) a minimum PCI of 60 for at least 2/3 of road miles.

Between 2021 and 2024, following the Board’s adoption of the updated Road Policies<sup>1</sup>, the Countywide average PCI increased slightly from 59 to 60, with the percentage of roads with a PCI over 60 rising from 57 to 62. These increases are attributed to a renewed focus on improving Poor Condition roads, the adoption of new roadways into the network (such as Trilogy in Nipomo), and the one-time funding increase to pavement management approved by the Board with the FY 22/23 Budget adoption.

### Budget Performance Measures

	MILES	AVG PCI	%Miles ≥ 60	AVG PCI	%Miles ≥ 60
		2021		2024	
Overall	1106*	59	58%	60	64%

\*County road miles in 2021 = 1104

The Pavement Program update presented in 2022 included the Board supporting targeted strategies for County roads by Classification as described in this report’s ‘Current Practices’ section. This strategy aims to establish a minimum pavement standard for all roads.

In addition to setting targets for Urban, Suburban, and Rural roadways, the supported strategies include incrementally improving all Poor Condition roadways. In 2024, the Suburban and Rural road classifications included 138 miles of low-volume Poor Condition roadways. Focus on incrementally improving these Poor Condition roadways was initiated in FY 23/24.

The impact of these roads on the Countywide PCI is significant, as outside of them, the Countywide average PCI is 64 as of 2024.

### Road Classifications

Category & Target	MILES	AVG PCI	%Miles ≥ Target	AVG PCI	%Miles ≥ Target
		2021		2024	
Urban – Good Condition & Avg 70	354	67	78%	69	82%
Suburban – Good Condition	404	57	59%	60	69%
Rural – Fair Condition	348	50	63%	51	70%

<sup>1</sup> Board of Supervisors Resolution No. [2021-026](#); Resolution Approving the Policies to Govern the Operation and Maintenance of the County Highway System

# PAVEMENT MANAGEMENT REPORT

Department of Public Works

## Poor Condition Roads

	MILES	AVG PCI	Miles	AVG PCI
	2021		2024	
Low-Volume Poor Condition	144	18	138	23
Remaining Roads	960	63	968	64

Regarding Urban roadways specifically broken down by Urban/Village areas, most enjoy an individual average PCI at or above the County average and the Urban road target. Areas missing the target, such as Shandon, Edna, Oceano, and San Miguel, have pavement projects targeted in the work plan forecast.

## 7. 2024 – 2028 Project Forecast

For reference, see Appendix A: Roadway Treatment Plan 2024-2028, which includes the forecast of roadways to be resurfaced listed by year. These roadways are primarily selected based on meeting the strategies discussed in this plan and toward the overall goal of improving roadway conditions Countywide.

The PMP strategy and routine maintenance are intended as a long-term approach to perpetuating and improving the pavement on County roads. The near-term plan to implement these strategies includes work in the following communities:

- Avila Beach
- Callender-Garrett
- Cambria
- Cayucos
- Garden Farms
- Los Berros
- Los Osos
- Los Ranchos/Crestmont
- Nipomo
- Oceano
- Palo Mesa
- San Miguel
- San Simeon
- Santa Margarita
- Shandon
- Templeton
- Whitley Gardens

The above communities will receive a combination of the following work:

- Surface treat ~45 miles of road each year
- Overlay ~8 miles of road each year
- Mandated facility upgrades directly related to the roadway, such as ADA curb ramps and traffic control devices
- Major patching for various high-maintenance rural roads to reduce time spent by road crews on corrective maintenance requests
- Routine inspections of the roads and measuring the PCI on a three-year cycle

The PMP will be delivered using both County crews and private contractors. County road crews will perform road preparation work, including asphalt patching, crack sealing, tree trimming, shoulder work, and culvert replacement on at least 45 miles of roads per year in advance of the micro seal performed by a contractor. In addition to this work, Public Works will monitor the maintenance efforts of County road crews using our Enterprise Resource Planning Software. Road segments with excessive maintenance costs will be identified for major patching. County road crews will perform road preparation work, including tree trimming, shoulder work, and culvert replacement on approximately 8 miles of road each year in advance of the overlay performed by a contractor.

## **APPENDIX A:**

### Roadway Treatment Plan 2024-2028
